LIST OF TABLES

CHAPTER I

Table 1.1 Selected Socio-Demographic and Reproductive Health Indicators for Tamil Nadu and India .................................................................17

CHAPTER III

Table 3.1 Sample Selection of Households for the Field Survey in Villupuram District, Tamil Nadu .................................................................60
Table 3.2 Field Survey Coverage ........................................................................61
Table 3.3 Sample Selection of Public Health Facilities for the Survey in Villupuram District, Tamil Nadu .............................................................62
Table 3.4 Percent Distribution of Respondents by Socio-Economic Characteristics, Household Field Survey in Villupuram District ...............83
Table 3.5 Percent Distribution of Respondents by Economic Indicators, Household Field Survey in Villupuram District .....................................85
Table 3.6 Percent Distribution of Respondents by Demographic Characteristics, Household Field Survey in Villupuram District .................86
Table 3.7 Percent of Respondents by Housing Characteristics, Household Field Survey in Villupuram District .....................................................87
Table 3.8 Percent of Respondents by Specific Exposure to Mass Media, Household Field Survey in Villupuram District ........................................88
Table 3.9 Percent of Respondents by Risk Factors, Household Field Survey in Villupuram District .................................................................88

CHAPTER V

Table 5.1 Prevalence of Various Types of Obstetric Morbidity among Currently Married Women (15-44), Tamil Nadu .............................................114
Table 5.2 Percentage Distribution of Currently Married Women (15-44) who Reported Some Obstetric Morbidity by Number of Complications, Tamil Nadu ........................................................................115
Table 5.3 Source of Treatment for Pregnancy Complications among Currently Married Women (15-44), Tamil Nadu ...........................................116
Table 5.4 Source of Treatment for Post-Delivery Related Complications among Currently Married Women (15-44), Tamil Nadu .......................117
Table 5.1

Prevalence of Post-Abortion Complications among Currently Married Women (15-44), Tamil Nadu ........................................................... 119

Table 5.2

Source of Treatment for Post-Abortion Complications among Currently Married Women (15-44), Tamil Nadu ................................. 120

Table 5.3

Prevalence of Various Type of Symptom of Reproductive Tract Infection/Sexually Transmitted Infection among Currently Married Women (15-44), Tamil Nadu ........................................................... 122

Table 5.4

Source of Treatment for Abnormal Vaginal Discharge among Currently Married Women (15-44), Tamil Nadu ........................................... 124

Table 5.5

Prevalence of Various Symptoms of Menstruation Related Problems among Currently Married Women (15-44), Tamil Nadu ................................. 125

Table 5.6

Source of Treatment for Menstruation Related Problems among Currently Married Women (15-44), Tamil Nadu ........................................... 126

Table 5.7

Prevalence of Various Health Problems among Currently Married Women (15-44) who are Currently Using Some Modern Methods, Tamil Nadu ........................................................... 128

Table 5.8

Source of Treatment for Health Problems among Currently Married Women (15-44) After Using Modern Methods, Tamil Nadu ........................................... 129

CHAPTER VI

INFLUENCES OF SOCIO-ECONOMIC AND DEMOGRAPHIC FACTORS ON REPRODUCTIVE MORBIDITY AND TREATMENT SEEKING BEHAVIOUR AMONG CURRENTLY MARRIED WOMEN IN TAMIL NADU

Table 6.1

Results of Logistic Regression Analysis of the Prevalence of Obstetric Morbidity by Background Characteristics, Currently Married Women, (15-44), Tamil Nadu ........................................................... 136

Table 6.2

Results of Multinomial Logistic Regression Analysis of Seeking Treatment for Pregnancy and Post-Delivery Complications by Background Characteristics, Currently Married Women, (15-44), Tamil Nadu ........................................................... 137

Table 6.3

Results of Logistic Regression Analysis of the Prevalence of Post-Abortion Complication by Background Characteristics, Currently Married Women, (15-44), Tamil Nadu ........................................................... 140

Table 6.4

Results of Logistic Regression Analysis of the Prevalence of Gynaecological Morbidity among Currently Married Women (15-44) by Background Characteristics, Tamil Nadu ........................................................... 143

Table 6.5

Results of Logistic Regression Analysis of Seeking Treatment for Abnormal Vaginal Discharge among Currently Married Women (15-44) by Background Characteristics, Tamil Nadu ........................................................... 145

Table 6.6

Results of Logistic Regression and Multinomial Logistic Regression Analysis of the Prevalence of Menstrual Problems and Seeking Treatment for Menstrual Problems by Background Characteristics, Currently Married Women, (15-44), Tamil Nadu ........................................................... 146
### Table 6.7
Results of Logistic Regression Analysis of Side Effects/Health Problems among Sterilised Women, IUD User’s, and any Modern Method Users, Currently Married Women (15-44) by Background Characteristics, Tamil Nadu

### Table 6.8
Results of Logistic Regression Analysis of Seeking Treatment for Health Problems among Sterilised Women Currently Married Women (15-44) by Background Characteristics, Tamil Nadu

### CHAPTER VII REPRODUCTIVE HEALTH PROBLEMS AND TREATMENT SEEKING BEHAVIOUR AMONG MEN IN TAMIL NADU

#### Table 7.1
Prevalence of Various Symptoms of Reproductive Tract Infection/Sexually Transmitted Infection among Currently Married Men, Tamil Nadu

#### Table 7.2
Percent Distribution of Currently Married Men who Reported at least One Symptom of RTI/STI by Number of Symptoms, Tamil Nadu

#### Table 7.3
Source of Treatment for Reproductive Tract Infection/Sexually Transmitted Infection among Currently Married Men, Tamil Nadu

#### Table 7.4
Percent of Currently Married Men Who Reported any Symptom of Reproductive Tract Infection/Sexually Transmitted Infection by Various Background Characteristics, Tamil Nadu

#### Table 7.5
Percent of Currently Married Men Who Reported any Symptom of Reproductive Tract Infection/Sexually Transmitted Infection by Indicators of Contraceptive Use, Awareness and Health Facility, Tamil Nadu

#### Table 7.6
Percentage Distribution of Currently Married Men Who Sought Treatment for Symptoms of Reproductive Tract Infection/Sexually Transmitted Infection by Type of Health Facility and Background Characteristics, Tamil Nadu

#### Table 7.7
Percentage Distribution of Currently Married Men Who Sought Treatment for Symptoms of Reproductive Tract Infection/Sexually Transmitted Infection by Type of Health Facility and Contraceptive Use, Awareness and Health Facility, Tamil Nadu

#### Table 7.8
Results of Logistic Regression and Multi-level Logistic Regression Analysis of the Prevalence of Reproductive Tract Infection/Sexually Transmitted Infection by Background Characteristics, Currently Married Men, Tamil Nadu

#### Table 7.9
Results of Multinomial Logistic Regression Analysis of Seeking Treatment for Reproductive Tract Infection/Sexually Transmitted Infection by Background Characteristics, Currently Married Men, Tamil Nadu
CHAPTER VIII AWARENESS AND PERCEPTION OF REPRODUCTIVE AND SEXUAL HEALTH PROBLEMS AND TREATMENT SEEKING BEHAVIOUR AMONG MEN IN TAMIL NADU

Table 8.1 Percent of Respondents Reported whose Awareness Emergency Contraception, Perception about Use of Condom, and Other Reproductive and Sexual Health Issues .......................................................... 173

Table 8.2 Percent of Respondents who Received Information on HIV/AIDS and with Knowledge of Various Modes of Transmission of HIV/AIDS ........... 175

Table 8.3 Percent of Respondents with Knowledge of Various Ways to Avoid of HIV/AIDS and Risks of HIV/AIDS ................................................ 176

Table 8.4 Percent of Respondents Aware of Specific Women Reproductive and Sexual Health Problems .............................................................. 177

Table 8.5 Percent of Respondents Aware of Reproductive and Sexual Health Services .......................................................................................................... 178

Table 8.6 Percent of Respondents Aware of Different Locations to Get Condom ........................................................................................................... 180

Table 8.7 Percent of Respondents with Preference for Various Types of Services for Treatment for RTI/STI Symptom ........................................... 180

Table 8.8 Percent of Respondents who ever had Pre-marital Sexual Activity ............................................ 181

Table 8.9 Percent of Respondents Reporting Awareness of Emergency Contraception, Use of Condom Can Prevent RTI/STI and HIV/AIDS by Selected Background Characteristics, Men (18-54 years), Tamil Nadu ..................................................................................................... 183

Table 8.10 Percent of Respondents Who Said that Sex Education is a Must at School Level, and Pre-marital Sexual Activities by Selected Background Characteristics, Men (18-54 years), Tamil Nadu ........................................ 184

Table 8.11 Percent of Respondents Reporting Awareness of Specific Reproductive and Sexual Health Services at Public Health Facilities by Background Characteristics, Men (18-54 years), Tamil Nadu ........... 185

Table 8.12 Percent of Respondents Reporting Specific Activities Related to Reproductive and Sexual Health and Satisfied with Service by Background Characteristics, Men (18-54 years), Tamil Nadu ........................................ 187

Table 8.13 Results of Logistic Regression Analysis of Awareness of Emergency Contraception by Background Characteristics, Men (18-54 years), Tamil Nadu ..................................................................................................... 189

Table 8.14 Results of Logistic Regression Analysis of Specific Activities Related to Reproductive and Sexual Health by Background Characteristics, Men (18-54 years), Tamil Nadu ........................................ 190

Table 8.15 Results of Logistic Regression Analysis of opinion on Sex Education at School Level and Premarital Sexual Activities by Background Characteristics, Men (18-54 years), Tamil Nadu ........................................ 192

Table 8.16 Results of Logistic Regression Analysis of Awareness of Reproductive and Sexual Health Services at Public Health Facilities by Background Characteristics, Men(18-54 years), Tamil Nadu ............ 194
Table 8.17  Results of Logistic Regression Analysis of Awareness of Reproductive and Sexual Health Services at Public Health Facilities by Background Characteristics, Men (18-54 years), Tamil Nadu...............195
Table 8.18  Results of Logistic Regression Analysis of Ever Discussed about Reproductive and Sexual Health Problems and Contraception by Background Characteristics, Men (18-54 years), Tamil Nadu...............197
Table 8.19  Results of Logistic Regression Analysis of Ever Accompany with Wife/Friends for Treatment for Reproductive Health Problems and Satisfied with Public Health Services by Background Characteristics, Men (18-54 years), Tamil Nadu .......................198

CHAPTER IX  REPRODUCTIVE AND SEXUAL HEALTH SERVICE FACILITIES IN TAMIL NADU

Table 9.1  Public Health Infrastructure in Tamil Nadu and India.................................202
Table 9.2  Trend in Primary Health Care Infrastructure, Tamil Nadu and India.............203
Table 9.3  Number of Centres at Lower Level and Population Covered by Type of Public Health Facilities .................................................................207
Table 9.4  Physical Infrastructure by Type of Public Health Facilities .......................212
Table 9.5  Availability of Services in Surveyed Public Health Centres ........................213
Table 9.6  Population per Medical Doctor, Pharmacist, Staff Nurse, and Beds by Type of Health Facilities .................................................................215
Table 9.7  Availability of Equipment in Working Conditions by Type of Public Health Facilities .................................................................216
Table 9.8  Availability of Equipment in Working Condition for General and Maternal Health Services by Type of Public Health Facilities .............218
Table 9.9  Availability of Clinical Equipment in Working Condition for Reproductive and Sexual Health Services by Type of Public Health Facilities .................................................................220
Table 9.10 Accessibility of Public Health Services by Type of Public Health Facilities .................................................................222
Table 9.11 Number of Reproductive Health Services Available at Public Health Centre by Type of Public Health Facilities .................................................................223
Table 9.12 Type of Reproductive and Sexual Health Related Cases Referred to Other Public Health Facilities .................................................................224
Table 9.13 Availability of Basic Medicine by Type of Public Health Facilities .............225
Table 9.14 Number of IEC Related to Reproductive Health Materials Available at the Public Health Centre by Type of Public Health Facilities .................................................................226
Table 9.15 Training and Camps on Reproductive and Sexual Health Services in Public Health Facilities .................................................................227
Table 9.16 Type of Reproductive and Sexual Health Counselling Available at Block Primary Health Centres by Sex .................................................................228
Table 9.17 Suggestions for Improvement of Quality of Reproductive and Sexual Health Services through Public Health Services by Type of Public Health Facilities .................................................................230
CHAPTER X SUMMARY AND CONCLUSIONS

Table 10.1 Prevalence of Reproductive Morbidity and Treatment Seeking Behaviour in Tamil Nadu ...............................................................236
Table 10.2 Summary Results of Logistic Regression Analysis of Prevalence of Reproductive Morbidity in Tamil Nadu ...........................................240
Table 10.3 Summary Results of Logistic Regression Analysis of Awareness and Perception of Reproductive and Sexual Health in Villupuram District, Tamil Nadu, Field Survey Data .........................................................242
