LIST OF APPENDIX TABLES

CHAPTER IV   REGIONAL VARIATIONS IN REPRODUCTIVE MORBIDITY 
AND TREATMENT SEEKING BEHAVIOUR IN INDIA 
AND TAMIL NADU

Table A.4.1 Percent of Women who Reported Various Types of Obstetric Morbidity 
and Percent who Sought Treatment for Complication, Currently 
Married Women (15-44) by States and Union Territories, India...............A1

Table A.4.2 Percent of Women who Reported Different Types of 
Gynaecological and Related Morbidity and Percent who Sought 
Treatment, Currently Married Women (15-44) by States and 
Union Territories, India .................................................................A2

Table A.4.3 Percent of Women who Reported any Menstruation Related 
Problems and Percent who Sought Treatment, Currently 
Married Women (15-44) by States and Union Territories, India ..........A3

Table A.4.4 Percent of Women among Current Users Contraceptive 
Method (Female Sterilisation, and IUD) who Reported any Side Effects 
or Health Problems, Currently Married Women (15-44) by 
States and Union Territories, India ..................................................A4

Table A.4.5 Percent of Women among Current Users Contraceptive Method 
(Oral Pill and Any Modern Method) who Reported any Side 
Effects or Health Problems, Currently Married Women (15-44) by 
States and Union Territories, India ..................................................A5

Table A.4.6 Percent of Men who Reported Symptoms of Reproductive Tract 
Infection/Sexual Transmitted Infection and Percent who Sought 
Treatment, by States/UTs, India ........................................................A6

Table A.4.7 Percent of Women who Reported Various Types of Obstetric 
Morbidity and Percent who Sought Treatment for Complication, 
Currently Married Women (15-44) by Districts, Tamil Nadu...............A7

Table A.4.8 Percent of Women who Reported Different Types of Gynaecological 
and Related Morbidity and Percent who Sought Treatment, Currently 
Married Women (15-44) by Districts, Tamil Nadu .............................A8

Table A.4.9 Percent of Women who Reported any Menstruation Related 
Problems and Percent who Sought Treatment, Currently Married 
Women (15-44) by Districts, Tamil Nadu ..........................................A9

Table A.4.10 Percent of Women among Current Users Contraceptive Method 
(Female Sterilisation, IUD, any Modern Method) who Reported any 
Side Effects or Health Problems, Currently Married Women (15-44) 
by Districts, Tamil Nadu ...............................................................A10
Table A.4.11 Percent of Men who Reported Symptoms of Reproductive Tract Infection/Sexual Transmitted Infection and Percent who Sought Treatment, by Districts, Tamil Nadu ................................................................. A11

CHAPTER V LEVELS AND PATTERNS OF REPRODUCTIVE MORBIDITY AND TREATMENT SEEKING BEHAVIOUR AMONG CURRENTLY MARRIED WOMEN IN TAMIL NADU

Table A.5.1 Percent of Currently Married Women (15-44) who Reported Obstetric Morbidity by Selected Socio-Economic Characteristics, Tamil Nadu ................................................................. A12

Table A.5.2 Percent of Currently Married Women (15-44) who Reported Obstetric Morbidity by Selected Demographic Characteristics, Tamil Nadu ................. A13

Table A.5.3 Percent of Currently Married Women (15-44) who Reported Obstetric Morbidity by Selected Health Service Factors, Tamil Nadu ............................................. A14

Table A.5.4 Percentage Distribution of Currently Married Women (15-44) who Sought Treatment for Pregnancy Complications by Selected Socio-Economic Characteristics, Tamil Nadu ........................................ A15

Table A.5.5 Percentage Distribution of Currently Married Women (15-44) who Sought Treatment for Pregnancy Complications by Selected Demographic Characteristics, Tamil Nadu ........................................... A16

Table A.5.6 Percentage Distribution of Currently Married Women (15-44) who Sought Treatment for Post-Delivery Complications by Selected Socio-Economic Characteristics, Tamil Nadu ........................................... A17

Table A.5.7 Percentage Distribution of Currently Married Women (15-44) who Sought Treatment for Post-Delivery Complications by Selected Demographic Characteristics, Tamil Nadu ........................................... A18

Table A.5.8 Percentage Distribution of Currently Married Women (15-44) who Sought Treatment for Post-Delivery Complications by Health Service Factors, Tamil Nadu ........................................... A19

Table A.5.9 Percent of Currently Married Women (15-44) who Reported Post-Abortion Complication (Induced Abortion, Spontaneous Abortion, and Induced or Spontaneous Abortions) by Selected Socio-Economic Characteristics, Tamil Nadu ......................................................... A20

Table A.5.10 Percent of Currently Married Women (15-44) who Reported Post-Abortion Complication (Induced Abortion, Spontaneous Abortion, and Induced or Spontaneous Abortions) by Selected Demographic Characteristics, Tamil Nadu ......................................................... A21

Table A.5.11 Percent of Currently Married Women (15-44) who Reported Symptom of RTI/STI, Abnormal Vaginal Discharge and Sought Treatment by Selected Socio-Economic Characteristics, Tamil Nadu ......................................................... A22

Table A.5.12 Percent of Currently Married Women (15-44) who Reported Symptom of RTI/STI, Abnormal Vaginal Discharge and Sought Treatment by Selected Demographic Characteristics, Tamil Nadu ......................................................... A23
Table A.5.13 Percent of Currently Married Women (15-44) who Reported Symptom of RTI/STI, Abnormal Vaginal Discharge and Sought Treatment by Health Factors, Tamil Nadu ................................................. A24

Table A.5.14 Percent of Currently Married Women (15-44) who Reported Menstrual Problems by Selected Socio-Economic Characteristics, Tamil Nadu ........................................................................................................ A25

Table A.5.15 Percent of Currently Married Women (15-44) who Reported Menstrual Problems by Selected Demographic Characteristics, Tamil Nadu .................................................................................................. A26

Table A.5.16 Percentage Distribution of Currently Married Women (15-44) by Treatment Seeking Behaviour for Menstrual Problems, by Selected Socio-Economic Characteristics, Tamil Nadu ................................................. A27

Table A.5.17 Percentage Distribution of Currently Married Women (15-44) by Treatment Seeking Behaviour for Menstrual Problems, by Selected Demographic Characteristics, Tamil Nadu .................................................................................................. A28

Table A.5.18 Percent of Women Currently Using Contraceptive Methods who Reported any Health Problems, Currently Married Women (15-44) by Selected Socio-Economic Characteristics, Tamil Nadu ................................................................. A29

Table A.5.19 Percent of Women among Currently Using Contraceptive Methods who Reported any Health Problems, Currently Married Women (15-44) by Selected Demographic and Programme Characteristics, Tamil Nadu .................................................................................................. A30

Table A.5.20 Percent of Currently Married Women (15-44) who Sought Treatment for Side Effects/Health Problems among Currently Using Contraceptive Method by Selected Socio-Economic Characteristics, Tamil Nadu ......................................................... A31

Table A.5.21 Percent of Currently Married Women (15-44) who Sought Treatment for Side Effects/Health Problems among Currently Using Contraceptive Method by Selected Demographic and Programme Characteristics, Tamil Nadu ......................................................... A32
