

ACKNOWLEDGEMENTS

It would not have been possible to complete this doctoral thesis without the help and support of the people around me, to only some of whom it is possible to give particular mention here.

First, I thank my principal advisor Dr. Soniya E.V. for her continuous support in the Ph.D. program. She was always there to listen and to give advice. She showed me different ways to approach a research problem and the need to be persistent to accomplish any goal.

It needs a special mention to our present director, Dr. M. Radhakrishna Pillai for extending his full support and providing all the facilities of the institute to complete the thesis work. I remember the generosity and encouragement of the late Dr.M.R. Das, the founder director, Dr.R. V. Thampan, the former director of this institute when I first joined here.

I am immensely thankful to Dr. Manjula and Dr. Purushothama, for their timely help and advice. I would like to thank Dr.Satheesh Mundayoor and Dr.Omkumar, who spared their precious time to read the draft of the thesis and forwarded their valuable suggestions to the completion of the thesis work. A special thanks to Manoj. P, who helped me a lot while learning new techniques in molecular biology. I am most grateful to Dr. Saha, Rubber Research Institute of India, Kottayam for providing the microsatellite oligos and to Dr.Abraham, National Bureau of Plant Genetic Resources, Thrissur for supplying the germplasm of black pepper without which the study was impossible. My sincere gratitude to Prasanth V.P. for his timely help in the statistical analysis. I am very much thankful to all the Scientists of RGCB for their support.

Also thanks to the folks at the Plant Molecular Biology lab for interesting discussions and being fun to be with. Thanks to my friends, Seetha, Nisha, Deepthy, Dr.Remakanthan, Dr.Gincy, Radhakrishnan, Sindhu, Maju, Nanditha, Vivek, Resmi, Thara, Rintu, Tomson, Susan, Jisha, Nisha, Lekshmi and Vijayalekshmi. I would also like to thank all my friends, colleagues, former seniors, and staff at RGCB. I would like to acknowledge the technical, administrative, library and DISC staff for their support and facilities that were indispensable. The financial assistance from Department of Biotechnology, India is duly acknowledged.

Last, but not least, I would like to thank my loving husband Dicto Jose, for his personal support and great patience at all times. His continuous encouragement had given confidence in me when I doubted myself, and helped to bring out the good ideas in me. My beloved parents, my dearest brother and sister-in-law, my dearest mom and brother-in-laws, have given me their unequivocal support throughout, as always, for which my mere expression of thanks likewise does not suffice.

Above all, I am always thankful to Lord Almighty for being with me at each and every moment with his blessings and guidance to the right path.

Nisha Joy
