List of Figures

1. Fig.1: World map showing number of new tuberculosis cases estimated by WHO in 2004
2. Fig.2: World map showing tuberculosis incidence rates estimated by WHO in 2004
3. Fig.3: Global trends in estimated tuberculosis incidence rates and the annual change in incidence rates from 1990 to 2004
4. Fig.4: Trends in estimated tuberculosis incidence rates, and the annual change in incidence rates, for nine groups of countries from 1990 to 2004
5. Fig.5: Estimated HIV prevalence in new tuberculosis cases, 2004
6. Fig.6: Annual risk of tuberculosis infection (ARTI) in India by zone and stratum
7. Fig.7: Diagnostic algorithm for diagnosis of pulmonary tuberculosis under RNTCP
8. Fig.8a,b: Mycobacteria stained after acid fast staining
9. Fig.9: M. tuberculosis colonies cultured on Löwenstein Jensen medium
10. Fig.10: Principle of PCR
11. Fig.11a: Total number of symptomatics, pulmonary and extrapulmonary cases in PMC from June 1997 to July 2001
12. Fig.11b: Percent symptomatics and pulmonary tuberculosis cases in PMC from June 1997 to July 2001
13. Fig.12a: Percent smear positive and negative pulmonary tuberculosis cases in PMC from June 1997 to July 2001
14. Fig.12b: Total number of smear positive and smear negative cases diagnosed from July 1997 to June 2001
15. Fig.12c: Percent distribution of smear positive and smear negative cases amongst symptomatics diagnosed from July 1997 to June 2001
16. Fig.12d: Average percent distribution of smear positive and negative cases amongst chest symptomatics diagnosed at the tuberculosis units from July 1997 to June 2001
17. Fig.13: Average number of symptomatics, smear positive, smear negative and non tuberculous cases from July 1997 to June 2001
18. Fig.14: Amplification using MPB64 primers
19. **Fig.15:** Amplification of different dilutions of template DNA prepared by serial dilution of *M. tuberculosis* using MPB64 primers

20. **Fig.16:** Summary of tuberculosis and non tuberculosis cases

21. **Fig.17:** PCR profile of respiratory sample of suspect at time of first reporting to the microscopy centre and after six months

22. **Fig.18:** PCR profile of respiratory sample from two suspects whose respiratory samples were sputum and saliva respectively

23. **Fig.19:** Delay in treatment initiation for smear positive and smear negative cases of tuberculosis
