Abstract

1.0. General Introduction 1-6

1.1. Aim and Objectives
  1.1.1. Objective I
  1.1.2. Objective II
  1.1.3. Objective III

2. Review of Literature 7-66

2.1. Definition
2.2. General characteristics of Mycobacteria
2.3. Pathology and pathogenesis
2.4. M. tuberculosis virulence and the disease process
2.5. Clinical features
2.6. Epidemiology of tuberculosis
  2.6.1. Global distribution
  2.6.2. Global and regional incidence
  2.6.3. Epidemiology of tuberculosis in India
2.7. History of tuberculosis control in India
  2.7.1. Government initiatives
2.8. Revised National Tuberculosis Control Programme (RNTCP)
  2.8.1. Case finding under RNTCP
2.8.2. Diagnostic paradigm of RNTCP
2.8.3. Treatment under RNTCP

2.9. Diagnostics for tuberculosis

2.9.1. Routinely used diagnostics and their limitations

2.10. Newer diagnostics

2.11. Polymerase Chain Reaction (PCR)

2.11.1. Principle of PCR
2.11.2. Nucleic acid amplification tests
2.11.3. Limitations of nucleic acid amplification tests
2.11.4. Utility of nucleic acid amplification tests

2.12. Aim and Objectives

3. Materials and Methods

3.1. Materials

3.1.2. Data sources and mode of ascertainment
3.1.3. Data entry and variables
3.1.4. Analysis of data
3.1.5. Bacterial culture media
3.1.6. Staining of slides
3.1.7. Processing of sputum samples and isolation of DNA
3.1.8. Amplification of DNA isolated from sputum samples
3.1.9. Agarose gel electrophoresis
3.1.10. Staining of gels
3.1.10. Standards

3.2. Methods

3.2.1. Ethical considerations
3.2.2. Collection of samples
3.2.3. Isolation of DNA
3.2.4. Amplification of DNA from respiratory samples
3.2.5. Agarose gel electrophoresis
3.2.6. Staining of gel
3.2.7. Strains and culture of Mycobacteria
3.2.8. Acid fast staining
3.2.9. Calculation of efficiency
3.2.10. Cost effective analysis of PCR to routine diagnostics
3.2.11. Calculation of equipment, labour, and material costs
3.2.12. Cost effective analysis: routine and the anticipated procedure

4. Results

4.1. Profile of tuberculosis in Pune Municipal Corporation

4.1.1. Trends of chest symptomatics, pulmonary and extrapulmonary tuberculosis cases under Revised National Tuberculosis Control Programme (RNTCP) in the Pune Municipal Corporation (PMC) area from July 97 to June 2001

4.1.2. Chest symptomatics, smear positive and smear negative pulmonary tuberculosis cases in the PMC area, from July 97 to June 2001

4.1.3. Utility of microscopy for diagnosis of pulmonary tuberculosis cases in the PMC area

4.1.4. Antibiotic treatment and radiological examination in the differential diagnosis of smear negative cases in the PMC area from July 97 to June 2001

4.2. Comparative efficiency of Polymerase Chain Reaction (PCR) to other routine diagnostics in the diagnosis of M. tuberculosis

4.2.1. Profile of Polymerase Chain Reaction using MPB64 primers

4.3. Efficiency of the Polymerase Chain Reaction (PCR) amongst clinical samples

4.3.1. Description of samples tested and profile of the symptomatics

4.3.2. Description of samples positive by microscopy

4.3.3. Smear positive cases, ATT response and confirmatory gold standard used

4.3.4. PCR data of smear negative samples from tuberculosis cases diagnosed on the basis of radiological examination, other routine diagnostics and clinical criteria

4.3.5. Smear negative cases, response to ATT, confirmatory gold standard used

4.3.6. Description of samples positive by culture

4.3.7. Data of samples positive only by PCR

4.3.8. ATT response and confirmatory gold standard used for cases positive by PCR

4.3.9. PCR data of controls
4.4. Comparative efficiencies of various diagnostics

4.4.1. Comparative efficiency of PCR to routine diagnostics
4.4.2. Comparative sensitivity, specificity, efficiency, positive and negative predictive value of PCR to routine diagnostics

4.5. Utility of PCR

4.5.1. Diagnosis of tuberculosis cases amongst sputum samples mixed with saliva
4.5.2. Time required for diagnosis
4.5.3. Diagnosis of tuberculosis cases with history of tuberculosis and contacts

4.6. Cost analysis of sputum smear microscopy, X-ray, culture and PCR.

4.6.1. Equipment and variable costs for sputum smear microscopy, culture, X-ray and PCR
4.6.2. Equipment costs for sputum smear microscopy, culture, X-ray and PCR
4.6.3. Labour costs for sputum smear microscopy, culture and PCR
4.6.4. Material costs (direct and indirect) for sputum smear microscopy, culture, X-ray and PCR
4.6.5. Comparative analysis of cost components for sputum smear microscopy, culture, X-ray and PCR

4.7. Cost effective analysis of routine versus modified method

4.7.1. Cost effective analysis

5. Discussion
