ACKNOWLEDGEMENTS

This thesis is submitted by an individual but it must be admitted that many persons have contributed in their own way to the completion of the same and the author owes all of them a deep sense of gratitude.

At the very outset, I express my heart-felt thanks to my Supervisor, Dr. S.W. Deshpande, Reader, Department of Psychology, University of Poona, for his stimulating guidance and candid suggestions. I have found in him a true guide, who has made me work hard and has also worked with me. I am also thankful to Dr. K.R. Mallappa, Professor and Head, Department of Psychology, Karnatak University, Dharwad, and to Dr. M.N. Palsane, Professor and Head, Department of Psychology, University of Poona, for lending me 'The Two-hand Coordination Apparatus'.

I owe my thanks to the Principals of Rajaram College, Shanu College, New College (Kolhapur); Bhogawati College, (Kurukali); Kasturbai Malchand College, (Sangli) and Ganapatrao Awade College, (Sangli) for giving me permission to collect data in their colleges. My thanks are due to all the students who are 1140 in number on whom the tests were administered and I am also grateful to those selected 120 students who have actually participated in the experimental work, without which the thesis would have not been completed.

My friend, Dr. V.R. Gunale has helped me a lot in drawing neat photographs of the figures. I acknowledge with thanks his deft touches to the photographs. Above all, I owe my deep sense of gratitude to my wife Mrs. Nayana Aljapurkar who has assisted me in the difficult task of data collection. She has managed nicely on the 'home front' and spared much time for my work.

V.B. Aljapurkar
