

LIST OF TABLES

Table No.	Legend	Page No.
2.1	Epidemiological time lines of chikungunya worldwide	17
2.2	Epidemiological timelines in India	18
4.1.	Primers used for the detection of CHIKV	59
4.2.	Primer sequences for diagnosis of DENV	59
4.3	Primer sequences used for Multiplex RT-PCR for DENV and CHIKV	59
4.4	Assay mix preparation for dengue serotyping	70
4.5	Assay mix preparation for Human specimen control	70
5.1	Optimized master mix for Multiplex RT-PCR DENV and CHIKV	90
5.2	Optimized cycling conditions for Multiplex RT-PCR DENV and CHIKV	90
5.3	Positivity of DENV by uniplex RT-PCR and Multiplex RT-PCR	92
5.4	Positivity of CHIKV by uniplex RT-PCR and Multiplex RT-PCR	92
5.5	Multiple sequence alignment of predicted amino acid sequences of the partial E2 protein of representative CHIKV 2008 and 2009 sequences and data base consensus sequences of different years of isolate along with S27 prototype strains which shows amino acid substitutions of S299N, T312M, A344T, S375T, V386G, W339R and S375P	101
5.6	Cytokine detected ranges in CHIKV and DENV patient samples	109
5.7.	Correlation of cytokine level with Dengue serotype and viral load	115
5.8	Correlation of cytokine levels with thrombocytopenia	116
5.9	Correlation of cytokine levels between acute and convalescent samples	117
5.10	Correlation cytokine levels with clinical manifestations of CHIKV patients	118
5.11	Correlation cytokine levels with clinical manifestations of the DEN patients	119
5.12	Correlation of liver enzymes with cytokine levels in dengue patients	120
