List of Figures

CHAPTER II:

Fig 1  Drainage basin map of Krishna River Basin  24
Fig 2  Geological map of Krishna river basin  29
Fig 3  Climate types of Krishna river basin (After Subrahmanyan et.al 1984)  33

CHAPTER IV

Part A

Fig 4  Basin map of Krishna river basin with water, bed and suspended sediments sampling locations  50
Fig 5  Downstream variations of conductivity Total dissolved solids, and Total suspended matter in different season  57

Part B

Fig 6  Plot of water-quality data in Carbonate system  71
Fig 7  Plot of Water –quality data in (a) Na-silicate (b) K-silicate (c) Mg-silicate and (d) Ca-silicate systems  73

Part C

Fig 8  Range and mean chemical composition of major and minor elements in the bed sediments of Krishna river basin  82
Fig 9  Scatter diagrams of the concentrations of Mn, P, V and Zn Vs Al in the Krishna river bed and core sediments  87
Fig 10  Downstream variation of transition elements in bed sediments of Krishna river basin  89
CHAPTER V
Part A
Fig 11 Downstream variation of metal/Al ratios of bed and suspended sediments in Krishna river basin

Fig 12 The basin map of Krishna river basin with sampling locations

Fig 13 Variation of runoff and sediment load with months for the year 1980-81 at four locations

Fig 14 Variation of suspended sediments in wet and dry seasons for important locations during the year 1971-84

Fig 15 Downstream variation of TSM with season during the year 1971-84

Fig 16 Yearly variation of suspended sediments for important locations during the year 1971-84

Fig 17 Variation of annual sediment load with runoff in the Krishna basin

Part B
Fig 18 Particle size and cumulative distribution in suspended sediments (August’84) in the Krishna Basin

Fig 19 Triangular diagram showing the distribution of suspended and bed sediments in Krishna river basin

Fig 20 Triangular diagram showing the overall distribution of suspended sediments at Krishna and its major tributaries (based on CWC data)

Fig 21 Downstream variations of sand, silt and clay in suspended sediments of Krishna collected in June and Aug. 1984

Fig 22 Diagram showing variation in the wt% of different size fractions along the length of Krishna river
VII

Fig 23  Grain size Vs mean monthly sediment transportation in the upstream locations of Krishna river basin.  124

Fig 24  Grain size Vs mean monthly sediment transportation in the upstream locations of Krishna river basin.  125

Fig 25  Grain size Vs mean monthly sediment transportation in the downstream and tributary of Krishna  126

Fig 26  Diagram showing longitudinal river profile and variation in different grain size parameters for suspended sediments along the river course  133

Fig 27  Diagram showing longitudinal river profile and variation in different grain size parameters for bed sediments along the river course  134

Fig 28  Scatter plot of mean size Vs sorting mean size Vs skewness and mean size Vs kurtosis in suspended sediments  138

Fig 29  Scatter plot of mean size Vs sorting mean size Vs skewness and mean size Vs kurtosis in bed sediments  139

Fig 30  Scatter plot of skewness Vs sorting kurtosis Vs sorting and kurtosis Vs skewness in suspended sediments  140

Fig 31  Scatter plot of skewness Vs sorting kurtosis Vs sorting and kurtosis Vs skewness in bed sediments  141
CM diagram of Krishna river sediments
The points show concentration in three areas i.e 1, 2 and 3

Part C

Triangular diagram showing the mineralogical composition of bulk core, bed and suspended sediments

Triangular diagram showing the mineralogical composition of size fractionated suspended and bed sediments

Diagram showing longitudinal river profile and variation in different minerals for bed sediments along the river course

Variation of Quartz/mineral ratios along the river course

Distribution of non clay and clay minerals at different size fractions in Krishna River Basin

Distribution of non clay and clay minerals at different size fractions in tributaries of Krishna
(a) Malaprabha-Sangam
(b) Bhima-Yadgir
and
(c) Tungabhadra-Mantralayam

Clay mineral distribution in Krishna river and its tributaries
(i) Krishna-Vijayawada
(ii) Tungabhadra-Mantralayam
(iii) Krishna-Sangam
(iv) Krishna-Kolhar
and
(v) Bhima-Yadgir

Vertical size distribution of clay and clay mineral in Krishna core sediments

Vertical size distribution of clay and nonclay minerals in Tungabhadra
CHAPTER IV

Fig 42 Sampling locations for core samples at Krishna and Tungabhadra 168

Fig 43 Excess Pb as a function of depth for various sediment cores 171

Fig 44 Downstream trend in the rate of sedimentation and flux of sediments in Krishna river 176

CHAPTER VII

Fig 45 Sediment yields from various sub basins of the Krishna river system 198

Fig 46 Showing increase chemical erosion rate with increase in sediment erosion rate 204
