List of Figures

1.3.1 Typical variations in phase constants ($\beta$) for dispersive and non-dispersive media ........................................ 5

2.1.1 Two wire transmission line as two port network ................. 10
2.1.2 Equivalent circuit model of transmission line of differential length $dz$ .......................................................... 10
2.2.1 Non-linear transmission line representation with varactor diodes 14
2.2.2 Equivalent circuit model with variable capacitor ............... 14
2.2.3 Considered non-linear transmission line in this thesis ........ 15

3.2.1 Relationship between current and magnetic flux for linear and non-linear inductors. .................................................. 22
3.2.2 Time domain signals applied for linear and non-linear inductor. 23
3.2.3 Variation of inductance with applied current. .................... 24
3.2.4 Impedance of non-linear and linear inductors. ................... 25
3.3.1 Non-linear capacitor constitutive relationships .................. 27
3.3.2 Variation in capacitance for different non-linearities ........ 28
3.3.3 Time domain variations of voltage and current ................. 29
3.3.4 Impedance variations of non-linear capacitor .................. 29
3.3.5 Changes in self resonating frequency with non-linearity .... 30

4.4.1 Unit cell of low-pass transmission line model .................... 33
4.4.2 Unit cell of low-pass transmission line with non-linear capacitor 33
4.4.3 Lowpass equivalent circuit with state variables ............... 34
4.4.4 Variation of capacitance with applied voltage ................. 35
4.4.5 Gain of unit cell of lowpass transmission line model ........ 36
4.4.6 Scattering matrices of unit cell .................................. 37
4.4.7 Complex propagation constant with non-linear capacitor .... 38
List of Figures

4.4.8 Impedance of non-linear capacitor .......................... 38
4.4.9 Unit cell of low-pass transmission line with non-linear inductors .................................................. 39
4.4.10 Scattering matrices of the unit cell with inductor as non-linear ......................................................... 39
4.4.11 Complex propagation constant with series inductors as non-linear .................................................... 40
4.4.12 Unit cell of low-pass transmission line with non-linear elements ....................................................... 41
4.4.13 Complex propagation constant with both elements as non-linear ....................................................... 42
5.2.1 Unit cell of highpass transmission line model with non-linear inductor .................................................. 44
5.2.2 Scattering parameters for the unit cell of highpass equivalent circuit model with non-linear inductor ............... 45
5.3.1 Unit cell of lowpass transmission line with Miller non-linearity inductor .............................................. 46
5.3.2 Voltage gain of unit cell with inductive loading .......... 47
5.3.3 Bloch impedance of the lowpass equivalent circuit with Miller inductive loading ................................ 48
5.3.4 Complex propagation constant for lowpass with Miller inductive loading .............................................. 49
5.3.5 Unit cell of lowpass transmission line with Miller capacitive loading .................................................... 49
5.3.6 Voltage gain of unit cell with Miller capacitive loading .... 50
5.3.7 Bloch impedance of unit cell of Miller capacitive loading ................................................................. 51
5.3.8 Complex propagation constant for lowpass Miller capacitive loading .................................................... 51
5.3.9 Scattering matrices for the lowpass Miller non-linear capacitive loading ................................................ 52
5.3.10 Highpass equivalent circuit with non-linear inductor Miller loading .................................................... 53
5.3.11 Scattering matrices for highpass equivalent circuit with non-linear inductor Miller loading ................. 54
