<tbody>
<tr>
<td>4.2.1.</td>
<td>Shows distribution of mean, standard deviations and &quot;F&quot; ratio on stressful life events for psychotics, neurotics and normals.</td>
<td>111</td>
</tr>
<tr>
<td>4.2.2.</td>
<td>Shows mean, standard deviations, 't' and 'p' values stress scores for males and females of normal, neurotic and psychotic groups.</td>
<td>115</td>
</tr>
<tr>
<td>4.2.3.</td>
<td>Shows 'F' and 'p' values regarding mean differences of males and mean differences of females, of normal, neurotic and psychotic groups on stressful life events.</td>
<td>117</td>
</tr>
<tr>
<td>4.2.1.4.</td>
<td>Shows means, standard deviations, 'F' and 'p' values of undesirable stressful life events of three groups under investigation.</td>
<td>119</td>
</tr>
<tr>
<td>4.2.1.5.</td>
<td>Shows mean, standard deviations, 't' and 'p' values of undesirable life events among males and females in normal, neurotic and psychotic groups.</td>
<td>120</td>
</tr>
<tr>
<td>4.2.1.6.</td>
<td>Shows 'F' and 'p' values of undesirable life events scores regarding male differences and female differences amongst normals, neurotics and psychotics.</td>
<td>121</td>
</tr>
<tr>
<td>4.2.2.7.</td>
<td>Mean, standard deviation, 'F' and 'p' values on desirable life events as experienced by normals, neurotics and psychotics.</td>
<td>122</td>
</tr>
<tr>
<td>4.2.2.8.</td>
<td>Mean, standard deviation and 't' value regarding scores of desirable life events for males-females of three groups.</td>
<td>123</td>
</tr>
<tr>
<td>4.2.2.9</td>
<td>Shows 'F' and 'p' values on desirable life events on male differences as well as female differences amongst three groups.</td>
<td>123</td>
</tr>
</tbody>
</table>
4.2.3.10. Shows mean, standard deviation, 'F' and 'p' values regarding ambiguous life events between normals, neurotics and psychotics. 124

4.2.3.11. Mean, standard deviation, 't' and 'p' values regarding ambiguous events on male-female comparison in normal, neurotic and psychotic group. 125

4.2.3.12 Shows 'F' and 'p' values regarding ambiguous life events within male comparison and female comparison of three groups. 126

4.3.13. Shows multivariate regression coefficients between stressful life events and some demographic variables of normals, neurotics and psychotics. 132

5.2.1. Shows mean, standard deviation, 'F' and 'p' values for each group on purpose-in-life test (cognitive planning). 140

5.2.2. Shows mean, standard deviation, 't' and 'p' values of cognitive planning scores of males-females of each group. 144

5.2.3. Shows 'F' and 'p' values of male normals, male neurotics and male psychotics as well as female comparison on cognitive planning scores. 145

5.3.4. Shows correlation between stressful life events and cognitive planning scores for normals, neurotics and psychotics. 147

5.4.5. Shows the regression coefficients between cognitive planning and some selected demographic variables for normals, neurotics and psychotics. 151

6.2.1. Shows mean, standard deviation, 'F' and 'p' values of each group on cognitive style test. 158

6.2.2. Shows mean, standard deviation, 't' and 'p' values of cognitive style scores on sex-comparison with each group. 160
6.2.3. Shows 'F' and 'p' values of male's scores and as well as female's cognitive style scores.

6.3.4. Shows correlation between stressful life events and cognitive style of normals, neurotics and psychotics.

6.4.5. Shows multivariate regression coefficients between some demographic variables and cognitive styles of normals, neurotics and psychotics.

7.2.1. Shows mean, standard deviation, 'F' and 'p' values of cognitive failure scores for each group.

7.2.2. Shows mean, standard deviation, 't' and 'p' values of cognitive failure scores for each group.

7.2.3. Shows 'F' and 'p' values of male comparison as well as female comparison amongst three different groups.

7.3.4. Shows linear correlation between stressful life events and cognitive failure scores for normals, neurotics and psychotics.

7.4.5. Shows multivariate regression coefficient between cognitive failure scores and some demographic variables for normals, neurotics and psychotics.

8.2.1. Shows means, standard deviations on cognitive approach scores in terms of beliefs and actions for normals, neurotics and psychotics.

8.2.2. Shows 'F' and 'p' values on cognitive approach scores in terms of beliefs and actions for three groups.

8.2.3. Shows mean, standard deviation, 't' and 'p' values on cognitive approach scores in terms of beliefs for male and female differences in each group.

8.2.3. Shows mean, standard deviation 't' and 'p' values on actions for male and female differences in each group.
8.2.4. Shows 'F' and 'p' values on cognitive approach scores in terms of beliefs for male-differences as well as female differences in the sample.

8.2.5. Shows 'F' and 'p' values on cognitive approach in terms of actions for male differences as well as female differences in the sample.

8.3.6. Shows correlation and 'p' values for stressful life events and its relation to cognitive approach for normals, neurotics and psychotics.

8.4.7. Shows regression coefficients, 't' and 'p' values on cognitive approach scores in terms of beliefs for normals, neurotics and psychotics.

8.4.8. Shows regression coefficients, 't' and 'p' values on cognitive approach scores in terms of action for normals, neurotics and psychotics.

9.2.1. Shows frequencies and percentages on social support for normals, neurotics and psychotics.

9.3.2. Shows frequencies and percentages on relationship between parents for normals, neurotics and psychotics.

9.4.3. Shows frequencies and percentages of relations of respondents with parents amongst normals, neurotics and psychotics.

9.5.4. Shows frequencies and percentages on childhood experiences for normals, neurotics and psychotics.

9.6.5. Shows frequencies and percentages on academic experiences for normals, neurotics and psychotics.

9.7.6. Shows frequencies and percentages on job experiences for normals, neurotics and psychotics.

9.8.7. Shows frequencies and percentages on marital relation for normals, neurotics and psychotics.

9.9.8. Shows frequencies and percentages on the cause of the breakdown for the neurotics and psychotics.
9.11.9. Shows 't' value on the relation between some socio-demographic variables and stressful life events as well as selected cognitive variables for normals, neurotics and psychotics.

10.2.1. Shows relationship between life stress events and cognitive variables under study.

10.3.2. Shows inter-correlations between cognitive variables for normals, neurotics and psychotics.

10.4.3. Shows "F" ratio and ranks on the selected cognitive variables and life stress events.
