Acknowledgements

This thesis is a part of transformational process in which I was trained to think independently, ask questions, dream big and differently, target higher and importantly achieve targets through hard work. The catalyst for the transformation and this thesis is my supervisor Prof. Ram Ramaswamy. He has been a constant source of inspiration and motivation. He was a great help especially in difficult times and given me the freedom to pursue my dream. He has shown a great deal of patience while dealing with my mistakes and has shown confidence in me. He has a unique practical approach to handle scientific problems and train students with interesting live examples through practical demonstrations. He is the best teacher I have met so far. His openness, humor, friendliness and positivity will keep enlightening my life. Thank you sir!

There are two important people whom I would like to acknowledge: Prof. Sudha Bhattacharya and Prof. Alok Bhattacharya. I would like to thank Prof. Sudha Bhattacharya for helping me understand difficult biological mechanisms through her simple and down to earth approach. Her patience and attention to detail are outstanding. I was greatly benefitted by the discussions with her on several biological aspects. Prof. Alok Bhattacharya has been pillar of strength since my PGD days. His suggestions, constructive criticism and encouragement have made this work possible. Though, he is considered to be a tough task master by some students but I believe that he instilled a sense of discipline and work ethics specially in initial years of PhD, without which it is difficult to implement or achieve targets. He has created a scientific environment for stimulating discussions. I would like to thank my collaborators Prabhat and Abhijeet for their help and frequent discussions. They conducted several experiments and validated computational work.

I was greatly benefitted by discussions with Jerzy Jurka (Genetic Information Research Inst.) which has helped to resolve some of the issues. I would like to thank Indian Council for Medical Research (ICMR) for providing the financial support. I would also like to thank Dr.
Yaj Medury and other members of Jaypee Institute of Information Technology University for their support during past few years. The faculty of my school have been very supportive specially Dr. Andrew Lynn, Dr. Narinder Sahni, Dr. Subbarao, Dr. Krishmachari and the Dean Prof. Indira Ghosh.

My friends and colleagues at the Center: Dhwani, Anchal, Vivek, Animesh, Sonika, Raghu, Alok, Hemant, Anupama, Soumaya, Payal, Candida, and Vikram with whom I shared moments of joy and sadness. Special thanks to Tauqeer who has been providing me research articles unfailingly. Dhwani needs a special mention as the famous guitarist of our group who has completed his thesis with so much coolness. Anchal was my neighbour at the Center and unfailingly first one to share news. The other part of the group who were unfortunately outside the main JNU campus have made sure my stay at SPS was comfortable and full of entertainment. They include Amitabh, Santosh, Manish Ji, Awadesh Ji, Umesh, and Rajat.

I would like to thank SIT office staff, Rajeev Ji, Kuldeep Ji, Mandal Ji, Ganeshan Ji, Mahesh, and Arun for their co-operation and help in dealing with administrative issues for the past 7 years.

Finally, I would like to thank a special person in my life Ria (my wife). She has provided me space and time to complete this work for the past 2 years. No words can describe the role of my mother, father and brother who are there as a source of unconditional support since I hardly spent any time with them during the PhD. I hope one day, I would fulfill all the dreams of my family and special people in my life.

Kamal
