ACKNOWLEDGMENTS

Although this thesis bears my name on the front, if it were not for the selflessness of the host of the people, I would not have been able to reach this point of my life on my own. Let me explicitly refer to some of them here and now with a remark that the list will not be exhaustive.

First and foremost I would like to express my extraordinary gratitude for the patience, counsel and leadership of my Ph.D supervisor, Prof. S. S. N. Murthy over the last five years, which has resulted in the present thesis. I have certainly grown throughout this study due to his words of wisdom, encouragement and faith in me. His ability to verbalize his thoughts with profound precision changed me in numerous ways. He has been a great teacher during all these years. He has always stimulated me to learn and achieve more and more, and also to just drill through every problem. I thank him for his valuable advices on scientific as well as general matters.

I would like to thank Prof. Rajiv Bhat, Dr. S. Patnaik and Dr. Pritam Mukhopadhyay, who have always been very encouraging and an immensely helpful in providing a healthy critique of my reports in the Ph.D. committee meetings, which helped me in many ways to improve on various aspects of my work as well as presentation. I also thank all the Faculty members at the S.P.S., who actually make S.P.S. a conducive place for inspiring the young students to do meaningful research in border line areas of Physics/Chemistry.

I am very grateful for the collaboration with German group viz. Prof. T. Bräuniger and Prof. H. Zimmermann, who provided us high quality samples as well as providing a healthy critique of our manuscript. Their contribution was indispensable for this thesis.
I also take pleasure to give thank to Prof. N. T. Correia and Prof. M. Dionisio (Departamento de Química, Faculdade de Ciências e Tecnologia da Universidade Nova de Lisboa - Campus de Caparica, Portugal) for giving me the moral support as well as encouragement at the time of my thesis work.

My friends Geeta Singh and Prabhat have not only been a great company in all these years, but they have always been more than forthcoming in discussing on the problems, I faced in my research work. They have been a great support in tough times I faced, many thanks to them for bearing me. I special thank to my seniors Md. Shahin, Madhusudan Tyagi, Navendu, Anjana, Ruchi, Somdutt Kausik, Chandrashekher Yadav and my friends Aditya, Dinesh, Pradip Das, Vinayak and Joyee for always being helpful to me. I also thank Bhasker, Awadhesh, Pramod Aryan, Budhi, Zaheer, Girish, Tripurari, Anil, Shivji, Gaurav, Madhu and Sachin for giving me the pleasurable company during my stay in SPS.

Finally, the most important entity which has supported me not just in the last five years, but all throughout, is my parents. Specially My father has always been a pillar of strength and motivation; principles and values; he taught me to approach every problem in an honest and straightforward way. Without his support and encouragement I would not have got so far.
