ACKNOWLEDGEMENT

"Life is not a brief candle to me; it is a sort of splendid torch, which I've got a hold for a moment and I want to make it burn as brightly as possible before handing it on to future generation." -- G.B.Shaw

Believing in this philosophy, I started my journey around six years back, towards a new world to pursue my dreams. These six years have been phenomenal. I've witnessed a lot of ups and downs during this brief span of time. Loads of memories have been filled in my heart. Today, when I look at those flashbacks, my eyes turn moist for a couple of seconds.

A journey is easier when you travel together. Interdependence is certainly more valuable than independence. This thesis is the result of six years of work whereby I have been accompanied and supported by many people. Happily, I now have the opportunity to express my gratitude for all of them.

First and foremost, I would like to express my indebtedness and gratitude to my supervisor, Prof Kasturi Datta. With her enthusiasm, inspiration, motherly affection and great efforts to explain things clearly and simply, Madam made science exciting for me. Throughout this period, she provided encouragement, sound advice, good teaching and lots of good ideas. Though she was sparing in her time, she was unsparing in her demand for excellence which motivated me to perform to the best of my ability. Time and again, her easy grasp of Biology at its most fundamental level helped me in the struggle for my own understanding. I sincerely thank Madam for her unfailing trust in me and for providing a caring but yet demanding ambiance, encouraging me further in my pursuit of HABP1.

It is hard to put to words my feelings about Ilora di. Our relationship has bloomed from her being a senior in my initial days in lab, to an affectionate Didi, a co working mentor and then gradual acceptance of me as a son and finally being my official co-supervisor. Though she has beaten me up so many times but still I am extremely happy to express my deepest sense of gratitude to my co supervisor for her supervision, advice, and guidance from the very early stage of this research as well as giving me extraordinary experiences throughout my work, without which the present thesis would not have seen the light of the day. Most importantly, she provided me unflinching encouragement and support in all possible ways. Her enthusiasm and positive outlook towards science is really impressive. Her truly ‘scientist’s intuition’ has made her a constant oasis of ideas and passions in science, which exceptionally inspired and enriched my growth as a student, a researcher and a scientist. I am indebted to her more than she knows. Her affection gave me the taste of homely atmosphere at JNU. I am grateful to her for providing me all the resources and more important her time for the discussions for any thing at post lunch.
sessions. Her advice on interpreting the results and productive comments have directly contributed to this study and enhanced the Ph.D experience. I had enjoyed and will always relish the parties she had given at her home especially those delectable home-made Bengali dishes. I like to acknowledge Guddi for her jovial attitude and refreshing company. They all helped me through difficult times and made good times even better. I also want to express my deepest gratitude to Chandanda for his indirect help and support for all my endeavours, using Ilora di as a medium and the greatest contribution has been his tactful ability to keep our “fiery” Ilora di cool.

I am indebted to the present and past Deans of the School of Environmental Sciences, whose support made my work sail through storms. The assistance from the teachers and staffs of the school are duly appreciated.

Today I remember all my teachers in post graduation who helped me in building a strong foundation that enabled me to carry out the present research. I am extremely thankful to all of them. I pay my special gratitude to Prof. Dhrubajyoti Chattopadhyay and Prof. I.B. Chatterjee, Department of Biotechnology, University of Calcutta from the deepest corner of my heart. Their enthusiastic guidance and expectations always persuaded me to perform the best.

I am very much grateful to Prof. Asish Datta, Director, NIPGR for his extended support and generosity in providing all the resources at his institute.

I would like to thank Prof. Chinmoy K. Mukhopadhyay, Special Centre for Molecular Medicine, JNU for his encouragement, guidance and sound advice throughout my Ph.D. I am grateful to him for his valuable and critical suggestions in some of the manuscripts. His patience and humility have been a constant source of inspiration for me.

I take this opportunity to pay my gratitude to all Professors of SES, JNU specially Prof. Sudha Bhattacharya for her help and valuable suggestions whenever required and Dr. Kasturi Mukhopadhyay for her support and encouragement. I am grateful to Dr. Shyamal Goswami, SLS, JNU for his fruitful suggestions and constructive criticisms, Prof. Gouranga Mukhopadhyay, SCMM, JNU and Dr. Rakesh Tyagi, SCMM, JNU for providing free access to their lab facilities. I also owe a great debt to Dr. Dipanakar Chatterjee, MBU, IISC, for providing help and advice especially in interpreting the 2D-gel analysis. I am grateful to Dr. Chandrima Saha, Scientist, NII, for all scientific discussions related to my work and the valuable suggestions rendered while writing my paper.

I am extremely thankful to Shubhira who has been with me all along, supporting me at difficult times and for all the emotional support and care she bestowed upon me. Her suggestions and encouragement at every step helped me to overcome all the obstacles in my work and life. Words fail me to express my appreciation towards her whose
dedication, perfection and persistent confidence in me, has taken the load off my shoulder and the last I can say is that I would have been lost without her.

I am profoundly grateful to all my friends and colleagues who created a congenial environment to work in and for leaving me with everlasting memories. I feel very proud to have seniors like Aniruddha da, Jhaji, Jaideep da (supplier team), Anupda, Sonu Madam and Anupama who have always helped me, especially in the beginning of my research career. Their ideas support and criticisms are greatly appreciated. Here, I need to mention that my search for journals and research articles started on Pubmed and ended with an e-mail to “supplier team”, who was always there to help me out with those articles. If it had not been him, I would not have had access to many articles, which I needed in formulating this thesis. I don’t have words to express my gratitude to him. My sincere thanks go to Vinod, Vivek, Hafeez and Rachna especially for her assistance in the final proofreading of the thesis; Mansi, Prasad and Bhaswati for all their encouragement and company in and out of the lab. I thank Soumya for his assistance with electron microscope imaging. It was great to have juniors like Kaustuv, Para, Sandeep, and Arif and trainees like Anamika, Shreya, Ritu, Prashant, Maruf, Jayeeta, Arpita, Shayan, Shilpita and Sashi bhusan. I extend my heart-felt thanks to all of them for their help and for being around me when I needed them.

Outside the lab is the hostel where every night I trudged back to sleep. My friends in ‘Kaveri Hostel’ deserve special mention for making JNU a better place to live in. Though the list is not so short, but special gratitude must go to Shouvik. His caring, yet guardian like attitude coupled with his ability to converse on any topic made him one of my best pals. Some people were kind enough to give me shelter when I felt like running away from the campus. No word is enough to pay my heartfelt gratitude to Soumya (Tata) with whom I first stayed in Delhi, Rupma and Pushkar who provided me refreshments when I got tired in the long-run. Pankaj, Shital, Tiltu, Tepu and Bapi have been a constant help to unwind from the stress of research. Sarbajit (Baba) has been an inspiration in tough times and Somnath was always there to take care of my parents. I gratefully acknowledge all of them for their love and for being such a great support.

As mentioned, six years is not at all a small period. Outside the lab, there was another life in campus. Kaustuv (Teko), Paramita (Chingri) and Shubhra (Shubhs) are the three musketeers who never made me feel lonely in this campus. In brief, they just made JNU my second home. It’s really a very small space to reflect our exact bonding. Our joint adventure to caves (never forget Teko’s ‘courage’), spending hours after hours at PSR, having dinner at dhabas and McDonalds (Special mentioning, Shuhb’s superb management power), relishing movies at PVR .... It’s a never-ending list of sweet memories. Reminiscing those golden moments, a million of emotions flicker about in the mind. Para’s ever dancing presence, Shuhb’s childish but caring nature and of course, last but not the least, Teko’s melodramatic comedy...are my treasures for whole life. Not
everyone is lucky to have such great friends. I am really grateful to them. Many thanks go in particular to Kaustuv (Teko) and Para (Chingri). A relationship with them involves mutual knowledge, esteem, and affection along with a degree of rendering service as friends in times of need and crisis.

I take this opportunity to thank all the administrative and technical staff of SES, JNU for assisting me in carrying out my work smoothly. Devi Singhji, Laxman and Rawatji deserve special mention. The assistance provided by Hari during early days of my Ph.D is duly acknowledged.

Financial support from CSIR in the form of SRF is duly acknowledged.

Mama, Mami, Kaka, Kaki, Pappa, Babai and most important Buroma are my constant source of inspiration throughout my life. I am grateful to all of them from the deepest corner of my heart.

Finally, I would like to express my deepest gratitude to my most precious ones who happily sacrificed their needs for the fulfillment of my dreams. Today, as I complete my thesis, I acknowledge my father’s great desire and trust in my work. Tutun has been on the receiving end of my brickbats and he has managed well. I want to mention here that my Ma has been a pillar of determination, support and love throughout and I pray to God, that I am able to rise up to her expectations.

Anindya
