Acknowledgments

I have always believed that whatever a person achieves is not only his or her effort but the effort of countless people before him and those with him. Now that I write my thesis, a journey back in time reminds me how much the ‘other’ people have contributed to the completion of this work. I realize now that it would be practically impossible to acknowledge all these people fully, therefore this acknowledgement stands to be my futile attempt to thank them.

I would like to thank Dr. Chandrima Shaha for her much needed guidance throughout my thesis work, both in professional matters and her valued advice on “life”. I will always cherish her teachings and would like to make them a part of my philosophy of life. I can’t thank her enough for the patience with which she dealt with my “theories and hypothesis”, without her guidance I would have been doing countless experiments without the big picture in mind. I would like to thank my doctoral committee members for their support and feedbacks. I would also like to thank members of the laboratory especially Ramesh Ji for his last second pieces of help and advices. He has always been instrumental in the rescue of the so called “doomed” experiments. Neela Ji can’t be thanked enough for his help in all the immunostaining protocols and discussions about alternative ways of doing an experiment including his other technical inputs. I would also like to thank Kishan pal Ji and Rawat Ji for their assistance. My seniors had been very good and gave me freedom and space to nurture my own thoughts and talents. Jitesh had taught me most of what I know now with inputs from Manohar ji, Vishnu, Ashish and DP, for which I can’t thank them enough. The most cherished memories of the past are parties with DP and his hilarious stories about events during his Ph.D that kept us all entertained. Chitra has always been a helping senior with tales about the so called ‘dreaded splotcha’ (her pet cat). I was blessed with good juniors too; Mani has helped me through a lot of difficulties, though I should confess he looks very innocent he is the most mischievous of the lot. Smriti has always been like a kid to me and we enjoy teasing her, Anees amazed me with his enthusiasm and dedication, Raksha’s philosophy, theories and ideas always keeps us on our ‘heels’ for he can come up with more questions than we can come up with their answers. Abhishek has been a great help by providing the Hitman series to vent out the frustrations and has been instrumental in helping me find the secret “passages” and “disguises”. I thank all trainees and project assistant in the lab especially Proteeti, Nikita, Kartik and Vinay for their valued help. Last but not the least I wish to thank Sudhin Sir for meticulously reading the thesis and helping me correct them. One thing that amazed me was the ease with which anybody new will fit in the SBL/CDR gang and I hope it stays like that forever.
Many of my seniors from other labs have been instrumental in my present knowledge; Surabhi and Suveera were the people, who laid down my foundation in cloning and other such matters. We always had a good party after a hard day's work. Surabhi also happened to be the most comforting friend to be there in times of need and Saurabh has always been there to take us out for a late night coffee or drive to cheer us up. Neha (Surabhi's Sister) was a breath of fresh air with all her management stuff and no science. Many other seniors like Ashutosh, Neeta, Shuchi Lavanya, Parshu, Nitin, Anupriya and many others are acknowledged for their guidance and help. I would also acknowledge innumerable juniors like Arush, TK, Shazia, Priya, Neha, Hamid, Divya, Vineet, Shweta, Anasua, Ruchir, Richa, Beena and many others for providing a fun and lively environment and help in time of needs.

My Ph.D batch was full of weird yet loving and adoring people who made a congenial environment for studies. I would like to thank all of them for all the help and the fun we had especially Satish, Manu, Suvendu, Harshita, Narendra, Namrata, Vibhu, Vikrant, Sharmishtha, Divya AV. Sharmishtha has become a close friend of mine in the recent years giving me inputs about the happenings in the 'outside world', Divya AV has always been a close friend and Vikrant still maintains the pact of 'pseudo fighting' every time we meet. I wish them all the very best in their lives. I would like to thank Dr Chitra Mandal and her students for helping us generate the human sera data.

Last but not the least I want to thank my family and relatives for providing me a good education and guiding me in life. Their patience and tolerance has been instrumental in my present way of thinking. I would always cherish the long discussions with my mother about the true value of life.
