

A C K N O W L E D G E M E N T S

Much of the material presented in this thesis is drawn from the experimental work carried on under Research Schemes 'Treatment and Disposal of Distillery Waste' sponsored by Shetkari Sahakari Sakhar Karkhana Ltd., Sangli, and Industrial Research Committee, Government of Maharashtra. The data collected on full scale treatment plants at various factories is also used in this thesis. Permission to use the data is gratefully acknowledged and appreciated.

The author wishes to express sincere appreciation to Ex-Prin.C.C.Kanitkar and Prin.S.D.Phatak for allowing me to use the College premises to carry out the pilot plant studies. The author is thankful to the authorities of the Shivaji University for allowing me to register as a self guide and carry the work in our College.

The author is thankful to all the Civil Engineering staff for their encouragement and assistance during the entire period of this work. My special thanks are due to all my Public Health Engineering laboratory staff without whose support this work could not have been completed.

I acknowledge with great sincerity the typing job of Shri C.H.Kulkarni.

Lastly I owe a great deal to my wife and my little sons, without whose patient understanding, love and assistance this thesis would never have been brought to completion.
