ACKNOWLEDGEMENTS

First and foremost, I would like to express my sincere gratitude towards my research supervisor Dr. Dinakar Salunke whose guidance has enabled me to complete this work. His hard work and dedication has always been an inspiration. I appreciate the trust he placed in me and the freedom he gave me to make mistakes and learn from them. I have obtained a fresh perspective on the practicalities of doing science.

I extend my thanks to Dr. S.K. Basu for providing me with this opportunity to work at NII and to Dr. A. Surolia for maintaining a standard conducive to research. Thanks are also due to Mr. Akhilesh Aggarwal, Mr. Kannan, Mr. Dahra and coworkers for their help with the administrative work. The financial support provided by CSIR and NII is duly acknowledged.

I have immensely benefited from the counsel and support of my DC members, especially Dr. K.J. Kaur and Dr. Ayub Qadri. Without their help it would have been difficult to reach this far. Thanks are also due to members of Cell Biology Lab-I for their help with sequencing related work, to members of Bioinformatics group for modeling and simulations and to numerous other people at the institute who have unfailingly lent a helping hand at the most inconvenient of times. I'm also grateful to the teams that have developed and made freely available crystallographic/modeling software – CNS, CCP4, PyMol and PISA.

This work stands on the technical support provided by Sushma Ma'am especially with peptide synthesis. Meticulous execution is something that I have learnt from her. The background assistance of Nihalji at all times has been very valuable. His energy and calm demeanor still amazes me. Sarnaji has been a great help with animal work. His humour has made me smile at the worst of times. Finally, I acknowledge the services of the support staff at NII as well as company engineers who have kept the 'machinery' oiled and running.

I consider myself lucky to have worked at SBU. My seniors Gaurav, Dhruv, Lavanya and Veenu made the lab feel like a second home. Lavanya, in particular, patiently taught me the nitty-gritty's of bench work. My colleagues, present and past including Vineet, Tariq, Arijit, Raghav, Ashish, Sariya, Deepi, Eshwari, Shashank, Shailja, Kamakshi, Priyanka, Chitraji, Insaafji, Pankaj and Suman have made each day enjoyable. I had something to learn from each one of them. A number of project assistants and trainees have also enriched this experience. I would specially like to mention Beena Patricia who is now a cherished friend.
Outside the lab, it has been the company of a number of people that has sustained me through these years. I thank my friends from the campus – Senthil, Ankush, Jitesh, Srikanth, SMS, Ruchir, Mani, Anup and Yogeshwar for their companionship. Being around my batch mates Pankaj, Vibhu, Manu, Vikrant and Narendra in all the bike trips, dramatics and badminton matches has made this the best period of my life. I am indebted to Shruti for the therapeutic head massages and grateful to Kanchan for being part of the new family. My batchmates from AIIMS Suvi, Shashank, Suryadeep, Tathagat and Debrup have been dependable companions and really fun to be with. I would specially like to thank Suvi for being such a wonderful friend.

I have no words to describe the encouragement that my family – Ma, Pitaji and Richa have given me. They have been no less than a life support system. This work is dedicated to them.

Suvendu
