ACKNOWLEDGMENTS

This thesis would not appear in its present form without the kind assistance and support of the following individuals and organizations. It is a pleasure to thank the many people who made this thesis possible. It will be simple to name all the people that helped to get this done, but it will be tough to thank them enough. I will nonetheless try...

Foremost, I would like to thank my supervisor, Dr. Amit Misra, who shared with me a lot of his expertise and research insight. Not only a great mentor and colleague, his socratic questioning, brought me closer to his perception of my thesis topic, eventually enabling me to grasp its stimulating complexity. Amit’s firm belief of achievement of success in implementation of this problem motivated my move towards this exciting research problem. His advice on interpreting the study results and productive comments contributed immensely to this study. He will always be a role model of a successful researcher in this field for me. This thesis grew out of a series of dialogues with my supervisor. His comments on chapter drafts are themselves a course in critical thought upon which I will always draw. His capacity to combine critique with an empathy towards students will always remain an inspiration. I feel fortunate and satisfied to have worked under his supervision and my utmost gratitude goes to him.

It is difficult to overstate my gratitude to Professor Venkatesh at IIT, Kanpur. With his enthusiasm, inspiration, and great efforts to explain things clearly and simply, he helped to make mathematics simpler for me. Throughout the mathematical modeling work period, he provided encouragement, sound advice on model implementation, good teaching of mathematics, good company, and lots of good ideas pertaining to model refinement.

A special gratitude is due to Dr. Gopal Gupta at Endocrinology Division, CDRI for knowledgeable inputs and discussions that were of essence to the progress of the in vivo efficacy testing work. Without his, and, the support of his team, the efficacy work would have never reached the result it did.

I would like to acknowledge my gratitude to Dr. A.K. Dwivedi for his thorough feedback and advice that has encouraged and guided me throughout the course of my work. I thank him for his valuable suggestions regarding HPLC problems. Special thanks goes to Dr. Satyawan Singh for vigilant supervision of my work. I thank Dr. R. Pal and Dr. P. Mishra for assistance provided whenever required.

I find no words to express my thanks to Shailesh from IIT Kanpur, in complete measure for his unstinting committment to helping see this project through to its final completion, and his equally generous and wise guidence during its development.

Graduate students Anupreet and Muskan from IIT Kanpur deserve special mention and are thanked for their help; in particular I would like to acknowledge the help of Aparnashilpa for her immense support.
Acknowledgments

Also thanks to Mr. J.P. Maikhuri at the Endocrinology division, CDRI, for his assistance and energetic support during design and implementation of animal studies.

I am also grateful to Rajeev, Vikas, Rajeev J. and Ashish from Endocrinology Division for their immense support and help extended to me during my experiments there. Their friendship, always refreshing, enhanced the Ph D experience.

I am grateful to all my friends and seniors from Pharmaceutics division, for their continued moral support and help. I thank Rahul for being a congenial colleague and assisting in animal experiments. I extend my thanks and pleasure to have worked with Shubhangi who helped in formulation development in the project. Mrs. Madhuri and Mr. Bhatnagar are thanked heart fully for their support provided to me. I would like to express my sincere thanks to Gurucharan, Ram Kumar and Chandramani bhaiya in our lab for their unwavering support in daily work. I extend a special thanks to Nabulal and Chattarpal at Endocrinology lab for dedicated aid in animal experiments and Mr. Verma at Toxicology division.

This thesis is dedicated to my parents, impetus behind all my good deeds. I thank them for their boundless love. I am forever indebted to my husband for his understanding, endless patience and encouragement when it was most required. I would have been lost without him. His assistance enabled me to bypass the more persistent obstacles to thesis completion. Without them none of this would have been even possible. I thank my brother Tushar for his constant encouragement.

My acknowledgement would be incomplete without the mention of the steadfast support of my parents-in-law.

I am very grateful for my years at Central drug Research Institute, made possible by the support from the CSIR, New Delhi during the course of this work.

I cannot finish without expressing my feelings to the animals who were silent but most important contributors and have sacrificed their life for this work.

Ritu Malik
