ACKNOWLEDGEMENT

I would like to thank Prof. Gaiti Hasan for accepting me in her lab as a graduate student. It was the time when I was getting rejections from all the places, but Gaiti gave me opportunity to prove myself. She supported and encouraged me during my stay in the lab. Gaiti has been an extremely patient guide. Even though I have done the same mistakes many times, she never lost hope and corrected me again and again. I had frequent discussions with her about different projects, which resulted in a successful PhD. I will always be thankful to her for her support and encouragement to try new things and showing faith in me. I would like to thank her for thorough checking and proofreading of this thesis. I am very thankful to Gaiti for consoling my mom occasionally.

I would also like to thank my thesis committee members Vatsala and Apurva for their interest, valuable advice and suggestions. Many thanks to both Vatsala and Apurva for giving me good recommendations for my further studies. I would like to thank Apurva for always pushing me to finish my work so that I can submit thesis on time. Frequent discussions with Vatsala and Apurva helped me to decide the lab for further studies.

Joining Lab-14 was a life time experience for me. All the lab members were extremely nice to me. My special thanks goes to the seniors of the lab- Satish and Mani. Mani taught me fly work (male female selection and virgin collection). He also taught me fly genetics, making strain and maintaining stocks. Special thanks to Satish for teaching me his favourite staging experiment and molecular biology related experiments. I would like to thank Suman for occasional discussion about work and helping me to understand fly genetics. I was lucky to have such supportive male seniors in female dominated lab. I had really good time with Mani, Satish and Suman. I would like to thank Archan for being a good friend and for being there in my initial time in the lab.

Initial time in the lab was little hard for me because I was not familiar with *Drosophila* genetics. I want to thank Suffia Ji for teaching me *Drosophila* genetics and her constant support and encouragement. A special thanks to her for teaching me adult brain dissection. I would like to thank Tarjan (Tarjani) for providing me fly strains and helping me with experiments. I had many personal and work related discussion with her during my frequent tea breaks. It was really nice to have her as colleague and friend. I would like to thank Tanya for solving calcium imaging related problems, bringing delicious cookies, cakes and brownies to the lab and giving me her space to sit in the lab. It was nice to have Sumita and Dhanya as seniors in the lab.

I would like to acknowledge current lab members who made my stay in the lab wonderful. I found a really good friend and roommate in Siddhartha. We spent a quality time together. I had many personal and work related discussions with him, which helped me a lot. He was always there to support me no matter what the condition was. I would also like to thank him for providing me fly strains and helping me with my experiments. Shlesha (expert madam) was good friend and a true colleague. She has always helped me with my experiments without any conditions. She was
always there to have discussions either work related or personal. I was lucky to have both Siddhartha and Shlesha as lab mates. I would like to thank Megha for helping me with western blots. It was really nice to have personal and work related discussion with her. She always offered me her help in solving all kind of problems. I was always surprised to see her enthusiasm about almost every matter and taking time to join in all events in the lab and outside the lab. Bipan (Deb Babu) has been a nice colleague and a good friend. I would like to thank him for teaching me his favourite technique, calcium imaging. We did a lot of gossip and personal discussions during our long and frequent tea breaks. Discussions with him about work or life have always been fun. Steffy has been more of a friend than colleague. She has always been there, starting from whenever I had to talk about a scientific hypothesis or a deeply philosophical discussion. I thank her for listening my cribbing and all the gossip. She was always there to help me solve any kind of problems and helping me with all kind of experiments. I was lucky to have her as my lab mate. It was really nice to have Dhanya SK (Dhanya 2), Ranjitha and Nandashree as a colleague in the lab. Preethi has always been a good colleague and friend. I can never forget our discussions during the tea sessions. I would like to thank her for helping me with adult brain dissection and occasional invitation to her home for delicious food. I would also like to thank her for helping me with some of crucial experiments.

Life in NCBS would have been very boring for me without Raghu Lab (sasural) members. Since I joined NCBS, Sudipta and Saurav were a very good friend. I have spent a quality time with both of them. They were always there to help me with any kind of issues. I would like to thank Rajan, Shweta, Sanjeev, Avishek, Pramod, and Kamalesh for providing me different reagents for experiments. They were always ready to share reagents whenever I needed.

I would like to acknowledge Deepak Nair for letting me work in his lab for purification of Orai. He has been very helpful and supportive during my stay in his lab. He always encouraged me at the time when protein purification was not working. I would like to thank Jitesh, Shivlee, Rahul, Manhar and Mary for helping me during my stay in Deepak lab. A special thanks to Manhar for teaching me SDS PAGE and protein purification.

My stay in NCBS has earned me some very good friends outside the lab. Deepak and Aswathi has been good friends with a pleasant word always. Their presence around has always been happy and joyful.

Many thanks to people in the fly stock facility specially Gajendra and Deepti, who keep the fly stocks going. I would like to give special thanks to Deepti for making STIM knockout strains. I would like to thank kitchen staff for all their efforts, Ranjith and the staff at the library, computer section, administrative and finance section for all their efforts in making my life in NCBS easier in their own way.

My heartfelt thanks to Mummy and Papa for supporting me throughout PhD. Their confidence in me and constant encouragement during course of PhD has been my motivation to
keep me going. They have been my friends and pillars of support taking detailed interest in my life. Their confidence in me gave me strength to keep on moving further for achieving my goals. I would like to thank my sister for being a very good friend and critic. She was always there to help and encourage me in all ups and downs in my life. I would also like to acknowledge my uncle and aunty for showing their confidence in me and helping me in every possible way.

Finally, I would like to thank God and all my well-wishers for providing me with every opportunity of learning during my stay in NCBS and outside. I have enjoyed every moment spent in this place.
