INDEX

Absorption
  blue shift, 63, 73
  n-π*, 83
Bathochromic shift, 44
Birefringence, 20
Braun model, 9
Charge
  generation, 8
  hopping, 10, 42
  mobility, 21
  transfer, 14
  transfer Complex, 15
  transport, 10
  trapping, 11
Charge Transfer Complex, 44, 131
Charge Transport
  in polybenzoxazines, 59
  in polymers, 39
Chirality, 123
Chromophores
  hyperpolarizability, 95
Conductivity
  temperature dependence, 64
  temperature dependence, 75, 85
Dielectric constant, 98
Differential Scanning Calorimetry, 49
Diffusion field, 4
Dipole moment
  excited state, 102
  ground state, 98
Disorder
  energetic, 10
  positional, 10
Disperse Red, 131
Electro-optic effect, 17
  in polymers, 115
  in photorefractive polymer, 136
  in PMMA, 116
Electron acceptors, 14
Exciton
  diffusion length, 9
  generation, 9
Experiments
  cyclic voltammetry, 50, 64, 74, 84
  dc photoconductivity, 23
  Debye Guggenheim method, 98
  modulated photocurrent, 24
  sample preparation, 43, 50
  solvatochromic method, 102
  temperature dependence, 22
  time of flight, 21
  cyclic voltammetry, 26
  electro-optic effect, 26
  four wave mixing, 141
  two beam coupling, 139
Faradaic current, 26
Figure of merit, 19
Fluorescence
  quenching, 63, 73, 84
  free volume, 121
Gain
  coefficient, 5
factor, 5
Gain beam, 5
Goliber and Perlstein model, 9
Guest-host, 116
HOMO, 13, 16
Hyperpolarizability
  as a molecular parameter, 18
  estimation, 107
  materials, 96
  two level model, 107
Hypsochromic shift, 44
Interference, 4
Kerr effect, 17
Kleinmann symmetry, 29
LUMO, 13, 16
Mobility of carriers, 10
Nonlinear Optics
  of organic molecules, 16
Onsager model, 8
orientational enhancement, 135
Phase shift, 5
Photoconducting Polymers
  classification, 40
  molecularly doped, 40
Photoconductivity
  in pmma, 42
  materials, 42
  quantum efficiency, 11
  requirements, 7
  sensitivity, 13
  sensitizers, 14
  processes, 7
  sensitizers, 13
Photocurrent action spectrum, 46
Photorefractive Polymers
  history, 6
  two beam coupling, 138
  introduction, 1
  Kukhtarev model, 3
Piezo-electric effect, 121
Plasticizers, 30
Pockels effect, 17
Polar order, 30, 120
Polar solvent, 103
Poling, 19
  contact, 29
  corona, 29
  electric, 29, 118
  optical, 29
Pump beam, 5
Push-pull chromophores, 18
Quantum efficiency, 12
Recombination
  bimolecular, 8
  geminate, 8
Response time, 143
Sandwich cell, 43
Size Exclusion Chromatography, 49, 61, 72, 83
Solvatochromism, 103
Solvent
  nonpolar, 98
  polar, 98
Solvent Polarity
  $E_I^E$, 104
  bulk, 103
Stoke’s Shift, 105
Transition
  n to $\pi^*$, 63
Transition moment, 107
Trap, 11
Trap limited field, 4
Two beam coupling, 5
Variable Range Hopping, 22, 23
