## List of Figures

1.1 $SU(4)_{\text{flavour}}$ multiplates of mesons ................................. 13
1.2 $SU(4)_{\text{flavour}}$ multiplates of baryons ................................. 14
1.3 (a) Combining a red and blue quark triplet produces a magenta (anti-
green) antitriplet and sextet. (b) The three anticolored diquark an-
titriplets. (c) Some of the multiquark, color-singlet states that can be
formed from quarks, antiquarks, diquarks and diantiquarks. (d) Other
possible multiquark/gluon systems. ........................................... 20

2.1 One gluon exchange model contribution to the binding of a quark-quark
configuration. ................................................................. 57
2.2 Bottom tetraquark states analogue of charm tetraquark states in the
mass region of interest. ......................................................... 84

3.1 Co-ordinate representation of the di-hadronic states as di-meson, meson-
baryon and di-baryon respectively. ........................................ 102
3.2 Two body decays of $Z_c^+ \rightarrow \psi(nS)\pi^+$, $Z_c^+ \rightarrow \eta_c\rho^+$ ............... 112
3.3 Two body decays of $Z_b^+ \rightarrow \Upsilon(nS)\pi^+$ ............................. 113

A.1 Quark–antiquark scattering, one-gluon exchange graph. ............... 148
A.2 Quark–antiquark scattering, pair annihilation graph. ..................... 149
