Acknowledgement

Standing on the verge of submission of my Ph.D thesis I cannot help but recollect the fond memories of those people whose presence I cherished throughout with great love and reverence. Attempt to acknowledge them by simply putting their names on a typed page would probably never justify their actual contribution. But years after now these faces will bring back the nostalgic memories of those priceless moments that I was lucky enough to spend with them.

First comes to my mind the name of Prof. Kasturi Datta, my Ph.D Supervisor. Research is not only accumulation of some scientific data. It's an endless journey. So many times I stumbled. So many times I faltered. And she was always there to help me out of them. I always felt her overwhelming presence around me. At times her apparent harshness saddened me. But, later I realized its necessity. She is always been a source of inspiration, motivation to me. She has always given me free hand to explore new things and constantly encouraged me to achieve my goal. She has a tremendous drive to get things done. I am deeply grateful to her for her sincere guidance and perseverance.

It's a great pleasure for me to work with Dr. Chetan Chitnis, my co-supervisor. Getting an opportunity to work with him is a turning point of my life. He introduced me to the fascinating field of malaria parasitology. He made me feel at home at IGGEB. I never felt that I was working in a different Institute, since he made me a part of his group. I cannot express my gratitude to him in mere words. He encouraged me when I was struggling but admonished me when I was lazy. I am enlightened not only by his outstanding scientific guidance but also valuable suggestions with regard to my work and many important aspects of life.

I am thankful to the past and present Deans of the School of Environmental Sciences for the selfless assistance and cooperation for my work. I am thankful to Prof. V.S. Chauhan, Director of ICGEB for extending full cooperation and support and relentless encouragements for my work.

I am extremely indebted to Prof. Asis Datta, Director, NCPGR for his valuable suggestions, support and encouragements for my work. He has been extremely liberal with his time and has inspired me greatly to do my very best.

I am deeply thankful to Dr. Sudha Bhattacharya and Prof. Alok Bhattacharya for their constant support, valuable suggestions and encouragements, which have helped me greatly.

I am highly thankful to Rana da who introduced me with Dr. Chetan Chitnis for initiating this ambitious project. He taught me malaria parasite culture, cell culture, cytoadherence assays and many other important aspects related to this work.

I am extremely thankful to Paushali di for her assistance in the flow cytometry analysis, which was an essential part of my work.

I am grateful to Suman da and Neelima di for their continuous support, encouragement and suggestions. They are always their to help me out in every possible way.

As usual, my journey was not a smooth one. It had its darker days. No result emerged! All ideas failed! Frustration filled up the whole atmosphere around me. On those cloudy days people like Suman da, Chinmoy da, Gauranga da and Rakesh ji were the silver lining. They also had gone through these phases. And how bravely they had faced them! They had never given up. I realized from them that the darkest night also comes to an end.

I would like to extend my thanks to Dr. Amit Sharma, Dr. Ashima Bharadwaj, Dr. Paushali Mukherjee, Dr. Naveen Khanna, Dr. Shahid Jameel, Dr. Kanury Rao for their full
encouragement, help and support without which I would not have been able to smoothly complete my work. I am extremely thankful to Dr. Pawan Malhotra, Dr. Sunil Mukherjee, Nirupam da for their suggestions, encouragement and support.

And how can I forget my enterprising labmates at JNU? I will remember the contribution of Tushar da, Anuradha di, Mastan, Ilora di, Sonu Madam, Archana, Rajeev, Meenakshi, Mithu, Jha, Jaideep, Aniruddha, Anupama, Vinod, Sarad, Vivek, Hafeez, Anindya, Mansi, Rachita, Bhaswati and Shilpee. They not only helped me with their scientific expertise and academic discussions, but also contributed to the overall healthy atmosphere of the laboratory. In the lab we worked not as isolated individuals but like a family.

My special thanks are due to Jha, Aniruddha, Jaideep, Hari who spent sleepless nights with me to complete the thesis. Without their help I would not have been able to complete the thesis. I always cherish those beautiful moments I spent with Jha. He enriched me with his wide knowledge on the structural biology and overall its relevance to the biological systems.

I would like to take the privilege to thank all the members of the malaria group at ICGEB for their cooperation, support and encouragement. I am extremely thankful to my labmates at ICGEB: Shams, Pattnaik, Suchi, Tarvinder (TKT, as I call her), Nivedita di, Kalyan, Anand, Alfredo, Mona, Dhiraaj, Rushdi for their selfless help, encouragement and repetitive reminder of my goal. They were always there to help me out whenever I needed them the most. I am extremely thankful to Suchi for her invaluable help during the last face of my work.

Its not only my labmates who helped me in my scientific pursuit but students from other labs also chipped in with valuable discussions and advice. Paramita, Sona, Satish, Indrani di, Ranjana, Rachna, Nivedita, Prabhat, Abhijeet, Vineet, Pramod, Abdul and Shekhar are some to name a few.

I would like to extend my thanks to many fellow students and scientists at ICGEB whose encouragement, selfless assistance where extremely essential for completion of my work. Indu, Saurabh, Sushil, Ravi, Reetesh, Ritika, Arindam, Dasrathi, Siddharth, Atish, Milan, Nitu, Kannan and Asif.

I am thankful to Rajesh, Parul, Sardhi of Special Centre for Molecular Medicine for their support and encouragement.

My Ph.D. thesis would have been incomplete without the selfless help of Hari Singh Negi, Devi Singh and Rawat.

I am extremely thankful to Dr. Tyagi and Pandey ji, Animal House, JNU for their assistance in animal handling and raising antibodies required for my work.

I am grateful to Rakesh, Narender and Sangram for their assistance in many steps of my work.

I am extremely grateful to my father, mother, brother and sister for their continuous support, encouragement and patience.

Financial assistance from the UGC, ICMR and the Wellcome Trust is gratefully acknowledged.

Here in this reminiscence of some memorable person I might have missed a few names. But I will always carry with me their fond memories, which like flashes of lightning will illuminate my fading memory, years from now.

Anup
