

CONTENTS

	Page No.
Declaration	i
Acknowledgement	ii
Abstract	iv
List of Abbreviations	vii
Chapter I : General Introduction	1-71
Early history of flocculation	4
Definition	5
Classification	5
Quantitation of flocculation	7
Factors affecting flocculation	11
Cell wall architecture of flocculent yeasts	17
Mechanism of flocculation	19
Onset of flocculation	22
Genetics of flocculation	24
Proteins involved in flocculation	38
Receptor structure	39
Industrial applications of flocculation	40
Improvement of the strains with respect to flocculation	42
Artificial control of flocculation	44
Flocculation in other yeast genera	45
Physiological role of flocculation	51
Objectives behind present investigation	53
References	54
Chapter II : Studies on flocculation characteristics of the flocculent yeast strain <i>Saccharomyces cerevisiae</i> NCIM 3528	72-96
Summary	73
Introduction	74
Materials and Methods	75
Results	79
Discussion	91
References	95

Chapter III : Extraction, purification and characterisation of the cell wall lectin from the highly flocculent yeast <i>Saccharomyces cerevisiae</i> NCIM 3528	97-140
Summary	98
Introduction	99
Materials and Methods	101
Results	110
Discussion	132
References	137
Chapter IV : Strain improvement of highly flocculent <i>Saccharomyces cerevisiae</i> NCIM 3528 : Construction of flocculent yeast with a killer character by protoplast fusion	141-174
Summary	142
Introduction	143
Materials and Methods	145
Results	151
Discussion	167
References	171
Chapter V : General Discussion	175-192
General discussion	176
Conclusions	186
References	188
List of Publications	193
