
LIST OF TABLES

Table	Page No.
1. Partition coefficient of ethanol between water and lipid (EPC).	96
2. Partition coefficient of ethanol between water and lipid (DOPC).	97
3. Effect of variable parameters on the particle size of EPC liposomes.....	103
4. Effect of variable parameters on the entrapment efficiency of EPC Liposomes.	105
5. Effect of variable parameters on the particles size of DOPC liposomes	111
6. Effects of variable parameters on the entrapment efficiency of DOPC liposomes.	113
7. Percent of AmB leached from various batches of EPC liposomes entrapped AmB – HPBCD.	141
8. Percent of AmB leached from various batches of EPC liposomes entrapped AmB – SBEB CD.	142
9. Percent of AmB leached from various batches of DOPC liposomes entrapped AmB – HPBCD.	143
10. Percentage of AmB leached from various batches of DOPC liposomes entrapped AmB – SBEB CD.	144
11. LD ₅₀ of different liposomal preparation of amphotericin B by Intra-venous route in mice.	165
12. Colony forming units (CFU) of <i>Aspergillus fumigatus</i> in lungs of infected mice after intravenous injection of 0.5 mg/kg of liposomal AmB preparation.	166
13. Plasma amphotericin B concentration in mice after I.V. administration of AmB DOC and PBLV entrapped inclusion complex.....	170
14. Hepatic levels of amphotericin B in mice after I.V. administration of AmB _{DOC} and PBLV entrapped inclusion complex.	172
15. Splenic levels of amphotericin B in mice after I.V. administration of AmB _{DOC} and PBLV entrapped inclusion complex.	173
16. Alveolar levels of amphotericin B in mice after I.V. administration of AmB _{DOC} and PBLV entrapped inclusion complex.	174
17. Kidneys levels of amphotericin B in the mice after administration of AmB _{DOC} and PBLV entrapped inclusion complex.	175
18. Pharmacokinetics properties of amphotericin B following I.V. injection as AmB _{DOC} , or in liposome entrapped inclusion complexes in rat plasma.	203
19. Pharmacokinetics properties of amphotericin B following I.V. injection as AmB _{DOC} or in liposome entrapped inclusion complexes at increasing lipid doses in rat plasma.	205
