LIST OF TABLES

Table 1. General structures of hypothetical ligands based on furanone bearing quinoline

Table 2. General structures of hypothetical ligands based on furanone bearing pyrazole

Table 3A and 3B. ADME-T prediction for the filtered “druglike” hits

Table 4. Toxicity prediction data of best hits using TOPKAT

Table 5. Docking score and binding interactions of screened ligands with PfLDH on MVD and Autodock 4.2

Table 6. Physical data of synthesized furanone bearing quinoline moieties

Table 7. Physical data of synthesized furanone bearing pyrazole moieties

Table 8. In vitro Antimalarial activity of furanone bearing quinoline moieties, represented as inhibitory concentration value (IC values in µg/mL)

Table 9. In vitro Antimalarial activity of furanone bearing pyrazole moieties, represented as inhibitory concentration value (IC values in µg/mL)
LIST OF FIGURES

Figure 1- Distribution of Malaria in World (based on WHO report 2015) 3
Figure 2- Percentage of \textit{Plasmodium falciparum} proportion distribution in India 5
Figure 3- Epidemiological Situation in INDIA 6
Figure 4- Data representing the decrease in malaria mortality (2000-2015) 7
Figure 5- Life cycle of \textit{Plasmodium parasite} 9
Figure 6- Possible mechanism involve in pathogenesis of Cerebral Malaria 12
Figure 7- Structures of Antimalarial Drugs 17
Figure 8- Structure of some known compound bearing furan moiety 33
Figure 9- 3D structure of protein (1LDG) showing binding of NADH and Oxamate (highlighted in window) within the pocket of \textit{PfLDH} 63
Figure 10- Line graph representing the energy score pattern of ligands in Autodock 4.2 (blue line) and MVD (red line) 65
Figure 11- Flow of virtual screening 67
Figure 12- Binding of NADH and CQ within the cavity of receptor \textit{PfLDH} 71
Figure 13A- Superimposition in binding mode of 8c (dark pink) with NADH (standard inhibitor, shown in yellow color) in the pocket of protein receptor \textit{PfLDH} (1LDG) 72
Figure 13B- Binding mode of compound 8c in the pocket of protein receptor \textit{PfLDH} (dark pink colored) exhibited eight H-bond interactions (shown as green dotted lines) with active site residues of receptor \textit{PfLDH} (1LDG) 73
Figure 14A- Binding mode of 8h (green color) with NADH (standard inhibitor) and substrate Oxamate (shown in yellow color) in the pocket of protein receptor \textit{PfLDH} (1LDG) 73
Figure 14B- Binding mode of 8h (green colored) in the pocket of protein receptor \textit{PfLDH}, exhibited eight H-bond interactions (shown as blue dotted lines) with active site residues of receptor \textit{PfLDH} (1LDG) 74
Figure 14C- Superimposition in binding mode of 8h (green) with NADH (standard inhibitor shown in yellow color) in the pocket of protein receptor PfLDH (1LDG)

Figure 15A- Binding mode of 11c (yellow colored) in the pocket of protein receptor PfLDH, exhibited five H-bond interactions (shown as green dotted lines) with active site residues.

Figure 15B- Superimposition of compound 11c (yellow colored) with NADH (standard inhibitor shown as blue colored)

Figure 16A Binding pose view of compound 11d (green colored carbon) exhibited four H-bond interactions (shown as yellow dotted lines) with active site residues of receptor PfLDH

Figure 16B- Superimposition in binding conformations of compound 11d (green colored) with NADH (standard inhibitor shown as blue colored)

Figure 17- Microscopic view of different stages of development of parasite Plasmodium falciparum

Figure 18A- Microscopic view of parasitized erythrocytes of P. falciparum culture before synchronization

Figure 18B- Microscopic view of parasitized erythrocytes of P. falciparum culture after synchronization

Figure 19- Flow chart showing stepwise procedure for SMI assay

Figure 20- The microscopic view parasitized erythrocytes from control culture of P. falciparum

Figure 21- The microscopic view of parasitized erythrocytes from culture of P. falciparum having standard drug (CQ) with no mature schizont

Figure 22- The microscopic view of parasitized erythrocytes from P. falciparum culture of potent test compound, reported only with some early schizont

Figure 23- The microscopic view of parasitized erythrocytes from culture of P. falciparum moderately potent compound, reported with a few no. of mature schizonts (shown inside the black rectangle)

Figure 24- The microscopic view of parasitized erythrocytes from culture P. falciparum of less active compound, having comparatively more number of mature dividing schizonts (shown inside the black rectangle)
LIST OF SPECTRAS

- IR spectra of compound 2a
- IR spectra of compound 3h
- IR spectra of compound 4d
- IR spectra of compound 5e
- IR spectra of compound 6c
- IR spectra of compound 6h
- NMR spectra of compound 2a
- NMR spectra of compound 6b
- NMR spectra of compound 6d
- NMR spectra of compound 8c
- NMR spectra of compound 14c
- Mass spectra of compound 9a
- Mass spectra of compound 9g
- Mass spectra of compound 11d
- Mass spectra of compound 14c
