

List of Tables

Table 2-1 Literature summary of tool design, process parameters and properties of dissimilar Cu-Al FSW	11
Table 2-2 IMCs phases based on participation of Cu and temperature (Akinlabi, 2011).....	36
Table 2-3 Hardness profile for different dissimilar Cu-Al FSW	39
Table 3-1 Chemical compositions of base materials	49
Table 3-2 Operating window of FSW machine	50
Table 3-3 Summary of methods for six set of experiments	52
Table 3-4 Chemical compositions of tool material	52
Table 3-5 Different tool designs used in the present investigation.....	53
Table 3-6 Process parameters of FSW used in present investigation	55
Table 4-1 Microstructures of different regions welded by welding speed of 40 mm/min.....	66
Table 4-2 Fracture features of tensile specimens under Tool 2 and Tool 3.....	75
Table 4-3 Concept of polygonal tool pin design and dimensions.....	77
Table 4-4 Fracture features of tensile specimens under Tool 5, Tool 6 and Tool 7	84
Table 4-5 Fracture features of tensile specimens under Tool 8, Tool 9 and Tool 10	92
Table 4-6 Macrograph examinations for different tool tilt angles	97
Table 4-7 Fracture features of tensile specimens under Tool 8, Tool 9 and Tool 10	101
Table 4-8 Microstructural features and SEM results of dissimilar welds under normal and hybrid FSW.....	109
Table 4-9 Fractured SEM results of tensile specimens under normal and hybrid FSW.....	117
