ACKNOWLEDGEMENTS

I am grateful to Dr. M.B. Sahasrabudhe, Ph.D. (Lond), Biology Division, Atomic Energy Establishment, Trombay, for his encouragement during all the phases of investigation. My sincere thanks are also due to Dr. P. N. Shah, M.D., F.C.P.S., Head, Endocrine Group, Indian Cancer Research Centre, Bombay for suggesting the problem and guiding the work on patients and permitting the use of clinical material described in this thesis. I am also thankful to Dr. U.S. Kumta, Ph.D. for his comments, criticism and useful suggestions in the final preparation of the manuscript.

I wish to express my gratitude to Dr. K. B. Eik-Nes and Prof. L. T. Samuel of University of Utah, U.S.A. for their continued interest and advise in the investigation and for providing facilities to carry out the tracer studies reported in this thesis. Thanks are also due to Population Council Inc, New York for the award of fellowship which enabled me to take the necessary training at the Institute of Steroid Biochemistry, United States Public Health Service, University of Utah, Salt Lake City, U.S.A.

Finally I wish to thank Prof. V. R. Khanolkar, M.D. (Lond), F.N.I., National Research Professor in Medicine and formerly Director, Indian Cancer Research Centre and Dr. (Mrs) Kamal J. Ranadive, Head, Applied Biology Group and Acting Director, Indian Cancer Research Centre for their constant encouragement and continued interest in the work.
