## Chapter 1. Introduction

---

<b>1.1. Applications of ultrafiltration (UF) membranes</b>	<b>3</b>
1.1.1. Water treatment	3
1.1.2. Wastewater treatment	4
1.1.2.1. <i>Oily wastewater</i>	4
1.1.2.2. <i>Textile industry</i>	5
1.1.2.3. <i>Pulp and paper industry</i>	5
1.1.2.4. <i>Tanning and leather industry</i>	6
1.1.3. Dairy industry	6
1.1.4. Biotechnology	7
1.1.5. Food and beverages	8
1.1.6. Animal products	8
1.1.7. Applications of UF in non-aqueous systems	8
1.1.7.1. <i>Paint solvent recovery</i>	9
1.1.7.2. <i>Recovery of dewaxing aids during oil dewaxing processes</i>	9
1.1.7.3. <i>Heavy oil upgrading or deasphalting</i>	9
1.1.7.4. <i>Treatment of used lubricating oil</i>	10
1.1.7.5. <i>Edible oil processing</i>	10
<b>1.2. Advantages of UF membranes</b>	<b>10</b>
1.2.1. Acceptable product quality	11
1.2.2. Low energy consumption	11
1.2.3. Continuous separation under mild conditions	12
1.2.4. Modular configuration	12

<b>1.3. Rational for the work</b>	13
<b>1.4. Scope of the work</b>	14
<b>1.5. Aims and objectives</b>	15
<b>1.6. Organization of the thesis</b>	15

---

## **Chapter 2. Literature survey**

---

<b>2.1. UF membrane preparation</b>	18
2.1.1. Phase inversion method	19
2.1.1.1. <i>Immersion precipitation</i>	20
2.1.1.2. <i>Vapour induced phase separation</i>	20
2.1.1.3. <i>Solvent evaporation induced phase separation</i>	21
2.1.1.4. <i>Thermally induced phase separation</i>	21
<b>2.2. Factors affecting membrane performance and stability</b>	21
2.2.1. Concentration polarization	22
2.2.2. Membrane fouling	23
2.2.2.1. <i>Hydraulic cleaning</i>	24
2.2.2.2. <i>Chemical cleaning</i>	25
2.2.2.3. <i>Mechanical cleaning</i>	26
2.2.2.4. <i>Electrical cleaning</i>	26
2.2.2.5. <i>Different techniques of foulant analysis</i>	26
2.2.3. Membrane compaction	27
2.2.4. Interaction of solute with membrane material	28
2.2.4.1. <i>Electrostatic interactions</i>	28
2.2.4.2. <i>Hydrophobic interactions</i>	29

---

## **Chapter 3. PAN based UF membranes: Optimization of preparation parameters**

---

<b>3.1. Introduction</b>	30
3.1.1. Parameters affecting membrane preparation and performance	30
3.1.1.1. <i>Polymer concentration in the dope solution</i>	30

3.1.1.2. <i>Solvent used in the dope solution</i>	32
3.1.1.3. <i>Role of additive</i>	33
3.1.1.4. <i>Evaporation time</i>	35
3.1.1.5. <i>Coagulation bath composition</i>	35
3.1.1.6. <i>Coagulation bath temperature</i>	36
3.1.1.7. <i>Support material</i>	37
<b>3.2. Experimental</b>	<b>38</b>
3.2.1. Determination of porosity of support material	39
3.2.2. Water holding capacity of support and membrane	39
3.2.3. Membrane Preparation	39
3.2.4. Flux and rejection analysis	41
3.2.4.1. <i>Flux analysis</i>	41
3.2.4.2. <i>Protein rejection</i>	43
3.2.4.3. <i>Bacteria rejection analysis</i>	44
3.2.5. Analysis of bubble point and pore size distribution	44
3.2.5.1. <i>Bubble point analysis</i>	44
3.2.5.2. <i>Pore size distribution analysis</i>	44
3.2.6. Compaction pressure of membranes	45
3.2.7. Membrane resistance	45
3.2.8. SEM analysis	45
3.2.9. FT-IR analysis	46
3.2.10. Spiral preparation and analysis	46
3.2.10.1. <i>Double leaf spiral module preparation</i>	46
3.2.10.2. <i>Water flux analysis of spiral modules</i>	48
3.2.10.3. <i>Bubble point analysis of spiral modules</i>	48
3.2.10.4. <i>Protein rejection analysis of spiral modules</i>	49
3.2.10.5. <i>Bacteria rejection analysis of spiral modules</i>	49
<b>3.3. Results and discussion</b>	<b>49</b>
3.3.1. Effect of polymer concentration in dope solution	49
3.3.2. Effect of organic additives on PAN <sub>13</sub> and PAN <sub>15</sub> membrane	52
3.3.2.1. <i>Interactions between additive and solvent</i>	54

3.3.2.2. <i>Spiral analysis</i>	57
3.3.2.3. <i>Bacteria rejection analysis of flat sheet and spiral module</i>	57
3.3.3. Effect of solvent used for dope solution preparation	58
3.3.4. Effect of support materials	61
3.3.4.1. <i>Membrane compaction</i>	69
<b>3.4. Conclusions</b>	<b>70</b>

---

## **Chapter 4. Surface modification of PAN based UF membranes**

---

<b>4.1. Introduction</b>	<b>72</b>
4.1.1. PAN membrane hydrolysis by bases	72
4.1.2. Manipulation of membrane porosity	74
4.1.2.1. <i>Manipulation of surface properties of PAN membranes</i>	74
4.1.3. Rejection of arsenic by negatively charged UF membrane	75
4.1.3.1. <i>Arsenic in drinking water and its removal</i>	76
4.1.3.2. <i>Membrane based processes</i>	77
<b>4.2. Experimental</b>	<b>78</b>
4.2.1. Membrane preparation	79
4.2.2. Flux and rejection analysis	79
4.2.2.1. <i>Protein rejection</i>	79
4.2.2.2. <i>PEG rejection</i>	80
4.2.2.3. <i>Arsenic (As-V) rejection</i>	80
4.2.3. Pore size analysis by solute rejection method	81
4.2.4. Surface modification	81
4.2.4.1. <i>Dead end mode</i>	81
4.2.4.2. <i>Cross flow mode</i>	81
4.2.4.3. <i>Treatment of PAN powder</i>	82
4.2.4.4. <i>Spiral preparation and analysis</i>	83
4.2.4.5. <i>Spiral modification and As-V analysis</i>	83
4.2.4.6. <i>Grafting of SSA on PAN<sub>23</sub> membrane</i>	84
4.2.5. Annealing treatment	84

4.2.6.	Membrane morphology and surface characterizations	84
4.2.6.1.	<i>SEM and EDAX analysis</i>	84
4.2.6.2.	<i>Contact angle</i>	85
4.2.6.3.	<i>ESCA analysis</i>	85
4.2.6.4.	<i>FTIR-ATR spectroscopy</i>	85
4.2.6.5.	<i>Atomic force microscopy (AFM)</i>	85
<b>4.3.</b>	<b>Results and discussion</b>	<b>86</b>
4.3.1.	Hydrolysis of PAN <sub>15</sub> membrane	86
4.3.1.1.	<i>Treatment of organic bases by dead end mode</i>	86
4.3.1.2.	<i>Treatment of inorganic bases by dead end mode</i>	87
4.3.1.3.	<i>NaOH treatment in cross flow mode</i>	92
4.3.1.4.	<i>Contact angle, IR and ESCA studies</i>	96
4.3.2.	Effect of annealing	99
4.3.3.	Hydrolysis of PAN <sub>23</sub> membrane and As rejection analysis	100
4.3.3.1.	<i>Surface modification, flux and rejection characteristics</i>	101
4.3.3.2.	<i>Contact angle and FTIR-ATR analysis</i>	103
4.3.3.3.	<i>EDAX, SEM and AFM studies</i>	104
4.3.3.4.	<i>Arsenic rejection analysis</i>	106
a.	Effect of feed concentration	107
b.	Effect of pressure and cross flow velocity	109
c.	Effect of feed pH	109
d.	Effect of feed temperature	110
4.3.4.	Spiral analysis and its modification	111
4.3.4.1.	<i>As-V rejection analysis</i>	112
4.3.5.	Grafting of SSA on PAN <sub>23</sub> membrane	113
<b>4.4.</b>	<b>Conclusions</b>	<b>115</b>

---

## **Chapter 5. ABPBI based UF membranes**

---

<b>5.1.</b>	<b>Introduction</b>	117
<b>5.2.</b>	<b>Experimental</b>	119
5.2.1.	Synthesis and characterization of ABPBI	120

5.2.2. Membrane preparation	121
5.2.3. Membrane characterization	122
5.2.3.1. <i>Flux analysis</i>	122
5.2.3.2. <i>Rejection analysis</i>	122
5.2.3.3. <i>Pore size analysis</i>	122
5.2.3.4. <i>Scanning electron microscopy (SEM)</i>	123
5.2.3.5. <i>Stability of ABPBI membrane in organic solvents, acid and base solution</i>	123
5.2.3.6. <i>Effect of glycerol treatment</i>	123
<b>5.3. Results and discussion</b>	<b>124</b>
5.3.1. ABPBI synthesis and characterization	124
5.3.2. Membrane preparation	125
5.3.2.1. <i>Effect of porous support material</i>	125
5.3.2.2. <i>Effect of nonsolvent</i>	131
5.3.2.3. <i>Effect of polymer concentration</i>	132
5.3.3. Membrane stability in organic solvents	134
5.3.4. Membrane stability in concentrated acid and base	137
5.3.5. Effect of drying and glycerol treatment	138
<b>5.4. Conclusions</b>	<b>139</b>
<hr/>	
<b>Chapter 6. Conclusions</b>	<b>140</b>
