LIST OF TABLES

4.1 Categorization of salt affected using visual interpretation. 69

4.2 Nature of the band used and degree of precision in estimating different type of alkali soils. 103

4.3 pHs and ESP of the soil as differentiated from the satellite data using DN values 156-184 . 109

4.4 pHs and ESP of the soil as differentiated from the satellite data using DN values (184-214). 110

4.5 pHs and ESP of the soil as differentiated from the satellite data under DN values (215-238). 111

4.6 Degree of alkalinity and their reflectance values for alkali soils of Etah. 112

4.7 Anionic composition of saturation extract of soils falling under DN value class 156-184. 113

4.8 Anionic composition of saturation extract of different soils falling under DN value class 185-214. 114

4.9 Anionic Composition of saturation extract of different soils falling in DN value class 215-238. 115

4.10 Range and mean values of Anionic composition of saturated extract of alkali soils in different reflectance value classes. a) ECe and Carbonate; b) Bicarbonate, Chloride, Sulphate. 116

4.11 Fertility status of soils falling under value class 156-184. 117

4.12 Fertility status of soils falling under DN value class 185-214. 116

4.13 Fertility Status of soils under DN value class 215-238. 119

(v)
4.14 Mean and range values of fertility parameters in Alkali soils of Etah District.

4.15 Relative mobility and average distribution of some elements and ions in rocks and water.

4.16 Average elemental composition of some igneous rocks.

4.17 Landuse in Etah District.

4.18 Characteristics for Land Evaluation of Alkali Soils in Etah District.

4.19 Returns from reclamation of Alkali soils.

4.20 Employment generation due to reclamation of alkali soils.
