ACKNOWLEDGMENTS

I would like to express my thanks to my supervisor, Dr M R Das, for his guidance and encouragement throughout the period of my work. He has never imposed his ideas, has provided me with a free academic atmosphere and has always been enthusiastic of any new ideas. This has greatly helped me in developing an independent line of thinking.

I have thoroughly enjoyed my stay at the CCMB. The academically stimulating atmosphere developed with such foresight by the former director, Dr P M Bhargava has been a great source of inspiration to me. I wish to express my thanks to the director, Prof D Balasubramanian, and his predecessor, Prof H Sharat Chandra for their encouragement and help at crucial times.

My thanks to Veena for introducing me to experimental molecular biology. Sunder has been helpful and cooperative, and it has been a pleasure working with him. Swamy and Murali, my colleagues in S 313, have always spared me their time when needed and have made my stay comfortable. I also thank my colleagues on the South Wing 2nd floor: Usha, Revathi, Swaminathan, Sudhakar, Shiv Kumar, Kumudini, Vishnupriya, Hemalatha, Satyanarayana and Raza Ali for cooperation at different stages of my work. It has been fruitful collaborating with Mohanty and Neeraj for part of my work. Also pleasing has been my interaction with Ghanshyam Swarup and the help rendered by Shubhangi in DNA sequencing. I fondly recall my association with Jagat in the early stages of my work; his attention has made finishing this body of work easier.
I would like to acknowledge Chengaiah of Purchase, Nageshwar Rao and Dhawalikar from chemical maintenance, Harinarayana Rao and his colleagues at the animal house, Mubarak Ali and others of tissue culture, Gopinath and the instrumentation group, Khalid, Rehaman and others in the photography section for all their support; and Nagesh, for oligonucleotide synthesis.

My thanks are also due to Drs Bernd Groner and Nancy Groner of the Freidrich Meischer Institute, Basel, for enabling me to carry out the DNA transfection experiments. I thank Dr M M Burger for encouragement and for providing me with a fellowship during my stay in Basel. I thank Dr L C Padhy and Vishwas Saranghdhar of the Molecular Biology Group, TIFR, Bombay, for helping me in some of the DNA transfection experiments.

I am very fortunate in having very good friends, like Sushil, Sridhar and Amit with whom I could share my joys and excitement in science. They have been very patient and listened with enthusiasm to my ideas. This has been a great source of support.

Asha, Girija, Raghavendra, Sreekanth, Nambi, Anil, Naren and Manna have been very supportive, helpful and encouraging.

My parents, brother and sister have supported me inspite of many difficult times. Meenakshi has been very patient and understanding.

Ranga Rao has been very cooperative in the typing of this thesis. I thank him and Arif for help in formatting this thesis. Giridharan has painstakingly drawn the figures. Bhaskar and Prakash are responsible for the good quality of the Xeroxing.
The financial support of the Council for Scientific and Industrial Research, New Delhi, is gratefully acknowledged, as is the support for a short term fellowship from the UICC, Geneva.
