ACKNOWLEDGEMENTS

Prof. D. Balasubramanian has been an example to me - in the manner of his guidance of the research work carried out for this thesis. He did not straitjacket or spoonfeed me. He never breathed down my neck for 'results'. He never threw me into the water to swim or to sink either, always pointing out mistakes and offering suggestions. He let me think of the questions I had to ask, so that I could develop and evolve as a researcher. He bore my arguments with great patience; winning most of the time, but losing (when he did) with the openness and disarming honesty of a scientist always willing to take the side of the truth. He treated my occasional forays into research areas falling outside the subject of my Ph.D, with the amused indulgence of a selfless mentor. I owe him a lot. He ranks beside my father, as a role model in life and science.

I owe a great deal as well to my friend and senior colleague, Dr. Ch. Mohan Rao; my wife and junior colleague, Manni; and my friend and batchmate, Dipankar Manna. These three people have contributed the most to making my stay in CCMB a worthwhile experience, both from intellectual and emotional points of view.

In addition I thank Raman, Chenchal, Yogendra, Srinivas, Gopalakrishna, Uma, Sivakami and Shalini for having made the lab an exciting and enjoyable place to work in. I enjoyed the many discussions I had with these folks. I also enjoyed the discussions I had with Gopal, Suresh, Ramakrishna, Sushil and Gordon Rodley on the lab corridor. Venuji, Sayeed Bhai and Ehsan Bhai were good friends and rendered invaluable help during the entire course of this work.

I have received welcome assistance from several people. Shri. V.M. Dhople operated the amino acid analyzer. Shri. Ahmed Hussain operated the ESR spectrometer.
Smt. Krishna Kumari and Smt. Subbalakshmi assisted in the operation of the HPLC and the FPLC instruments on several occasions. Dr. C.S. Sundaram advised me on various practical aspects of the NMR experiments and personally operated the spectrometer to collect data for my samples.

I would like to make special mention of the pleasure I have had in interacting with the staff of the instrumentation section, the photography section and the drawing office. I appreciate, in particular, the help and cooperation I have received from Shri. V. Sekar Ramachandran, Smt. Asha Ramesh, Shri. V.K.Sarma, Shri. B. Gopinath, Shri. C. Venumadav, Shri. Bapi Raju, Shri. R.E.C. Johnson, Shri. Seshu Prasad, Shri. Sahakar, Shri. Fernandez, Shri. Narahari and Shri. Khalid Siddiqui. I would like to gratefully acknowledge the services of Shri. Prem Kumar, Shri. A.P.G. Rao, Shri. Chandramouli, Shri. G. Giridharan, Shri. Koteshwar Rao, Shri. Ashok Baswa, Shri. Rehman, Shri. Nageshwar Rao, and Shri. Ramesh. I am grateful also to the staff of the library, workshop, laboratory services, administration, special chemicals, and stores and purchase sections for services rendered.

I am thankful to all the research fellows of CCMB for the pleasure of their company, on many social occasions. I am grateful to Prof. D. Balasubramanian, Prof. H. Sharat Chandra' and Dr. P.M. Bhargava for having provided a good atmosphere for research in CCMB, during different stages of its existence and growth.

I thank Shri. Prakash and Shri. Bhasker for the photocopying jobs they have done for me throughout this period. Finally, the financial assistance provided by the Council of Scientific and Industrial Research (C.S.I.R., India) in the form of research fellowships is gratefully acknowledged.
