List of Tables

2.1 Comparisons of speech synthesis techniques ........................................... 29
2.2 Comparison of speech synthesis techniques with respect to considered parameters ........................................... 31
3.1 Example vowels in the three considered languages and their pronunciations ........................................... 34
3.2 Example consonants in the three considered languages ........................................... 35
3.3 Dependent vowels in the considered languages and their pronunciations ........................................... 36
3.4 Use of dependent vowels in producing new sounds ........................................... 36
3.5 Set of basic speech samples ........................................... 37
3.6 Example scripts and unit types involved ........................................... 39
3.7 Comparisons of proposed model with syllable-based technique ........................................... 54
4.1 Pronunciation of a number in different scenario ........................................... 61
4.2 Pronunciation of numerals up to 10 in the three considered languages ........................................... 63
4.3 Pronunciation of numerals for 10th positions in the three considered languages ........................................... 64
4.4 Example scripts and pronunciation repetitions for “2” at unit place ........................................... 64
4.5 Example scripts and pronunciation repetitions for “2” at tenth place ........................................... 64
4.6 Pronunciation of Odia numerals with starting (column wise) and ending (row wise) similarity ........................................... 65
4.7 Pronunciation of Hindi numerals with starting (column wise) and ending (row wise) similarity ........................................... 66
4.8 Pronunciation of Bengali numerals with starting (column wise) and ending (row wise) similarity ........................................... 67
4.9 Proposed techniques for enhancing quality of output speech ........................................... 71
5.1 Proposed techniques for enhancing quality of output speech ........................................... 83
