ACKNOWLEDGEMENT

Words cannot express the depth of gratitude that I feel for all those who have helped me in the last four years. Working with Dr. Raj has been a wonderful experience for me. In him I found a young and energetic person who always had time to discuss and solve my problems. He made sure that I design and execute experiments logically and discussed the data critically at length. He afforded me freedom to carry out experiments at my own pace but at the same time made sure that I did not drift away. He helped me not only with problems at the bench but also in improving my verbal skills. His friendly nature made me feel so comfortable that I always cherished his company.

My thanks are due to Dr. Om Singh for his cooperation and help. He has never denied me access to his lab facilities. His analytical bent of mind has often helped me in critically evaluating my data.

Prof. Talwar remains a source of inspiration in many ways. His judicious approach to science and his astuteness in coming out with new ideas have often amazed me. I have benefited a lot from his association.

I was lucky enough to find in Arun an a friend who had "special" ways of expressing his love for me. I recall with nostalgia the days when I had just joined the Institute and he helped me getting started. I owe my knowledge of Immunochemistry to him. He was always there when I needed him; both to share my joys and sorrows. His enterprising nature helped me in "bypassing" depressing moments. He continues to be a "lovely" companion.

I could not have succeeded in my work but for the excellent animal facility provided by Dr. Rajesh Anand.
I express my thanks to Dr. Kanury Rao, Neena Malini Gupta, and Rakesh Arora for the peptide synthesis support.

I shall remain indebted to the members of the Immunology laboratory for helping me in various ways. Anil, Sreechand, Sweety, Kewal, and Yadav used to consider me a member of their group inspite of my having shifted to Immunogenetics. They still go out of their way to help me.

It was a pleasure to work in the Immunogenetics lab. I could not have found a more amiable and helpful working atmosphere. The stimulating scientific discussions that I used to have with Lakshmi, Shabnam and Syama have often kindled new ideas in me. I have troubled Shubhendu, Priya and Birender with something or the other everyday and they have always borne it with a smile. I remain beholden to all members of the lab.

I would like to express my sincere thanks to Rahul, Adarsh, Ashok, Dayanand and Ramesh for helping me with radioimmunoassays.

I acknowledge the financial support afforded by N.I.I.

I fumble for words to express my gratitude to my parents who have been patient, understanding and supportive of my research interests.

SUBASH SAD
