ACKNOWLEDGEMENTS

I would like to take this opportunity first to express my gratitude to Prof. G.P. Talwar for giving me an opportunity of working in this esteemed Institute towards fulfillment of PH.D. programme. I particularly thank him for giving valuable suggestions on some interesting observations which channelized the work leading to the culmination of this thesis. His sustained interest and constructive criticism has been a source of inspiration for me.

I sincerely thank (Director Red Cross Blood Bank) Dr. B.S. Anand, Dr. S.K. Sareen (G.B. Pant Hospital, New Delhi) and Dr. Raj Mehrotra (K.G.M.C, Lucknow) for providing me the blood samples, without which this work couldn't have been undertaken.

I deeply appreciate Dr. H.E. Blum (Massachusetts General Hospital) for exhaustive discussions and helpful suggestions on the work carried out.

I thank the members of doctoral committee Dr. H.K. Das (J.N.U), Dr. Shaheed Jameel (ICGEB), and Dr. Souravi Ghosh (N.I.I) for their critical evaluation and suggestions offered at various stages of the work.

I would also like to thank Dr. Shakti Upadhyay for helping me with the electron microscopic studies and Charu for the electron micrograph's.

I deeply appreciate the efforts made by Ashish Das and
Dr. Ajay Kumar for providing me with the various oligonucleotides used in the study.

I acknowledge the help rendered even at odd hours by various members of Gene Expression Laboratories especially Dr. S. E. Hasnain, Dr. Sher Ali, Reddi and Srinivasan.

This list would be incomplete without mentioning Chandrashekhar who removed the fear of DNA sequencing from my mind and sharing various tricks of the trade involved in recombinant DNA techniques.

I would like to thank the technical help offered to me by Pandey, Kiran Pal, Ramboth, and Manmohan Gupta, with a special thanks to Sunder Bisht for patiently typing out the thesis. Gopal Basnotra’s help is gratefully acknowledged for the photographs and slides and Babu Lal’s for xeroxing.

Finally I would like to the mention the name of Dr. P. S. Khandekar to whom I am most indebted to, for the successful completion of this work which culminated in the form of this thesis. I have no words to acknowledge his involvement in every aspect of the work carried out for this thesis. His persistence, patience and tenacity helped me tide over the period when the going was not smooth. He made me feel more like a colleague rather than guide and the guided. It has been a privilege as well as pleasure working under him.
