ACKNOWLEDGEMENT

From the inception of the idea to study Technology Management & Transfer in Indian Environment with respect to the Integrated Guided Missile Development Programme, I have received help from many persons and institutions. Though I express my deep feelings and gratitude to all of them, I am unable to list all their names individually. But I must mention a few names without whose help and cooperation it would not have been possible to complete the work.

First and foremost, I express my sincere respect and profound gratitude to my supervisor, Dr. (Mrs.) Pratibha Joshi. Her constant advice, guidance and direction have been of immense value to me both in respect of this work and my status as a student constantly on travel. The enlightened discussions I had with her many times helped a lot in translating my thoughts and ideas systematically. I had also the privilege of receiving helpful comments and necessary corrections from her regarding the various issues dealt with in this thesis. In spite of her busy schedule, she patiently spared much of her valuable time to me and my work. Otherwise, it would not have been possible for me to complete this work. It was indeed my good fortune to have had such an able and devoted guide as Dr. (Mrs.) Joshi.

I am indebted to Dr. S.L Joshi, Professor and Head, Department of Commerce and Management Sciences, University of Pune, for his kind cooperation in all respect during the period of my study.

It was my privilege to work with a large number of DRDO’s Missile Scientists, Programme Directors, and Heads of Public Sector Undertakings for this thesis. I have extensively used their library and
other facilities. I take this opportunity to express my gratitude to Dr. Sivthanu Pillai, Dr. VK Saraswat, Shri Prahalda, and Shri KVSS Prasada Rao for their kind cooperation and encouragement.

I owe my indebtedness to Chairman & Managing Director MIDHANI Dr. AK Taneja for his blessings and help.

I must express my sincere gratitude to all the scientists from 12 laboratories who answered my questions on the Technology Management and Technology Transfer issues in order to arrive at important parameters. During the course of study, I had also discussed with many others working in BDL, HAL, RCI, DRDL, and DRDO HQ and shared my ideas with them. Their directions, experiences and written materials on the subject had been very helpful in giving the insights into the problems and steer the thesis appropriately.

I express my thanks to Directors ARDE, HEMRL and CEES and specially Shri S. R Madhvan, Smt. Alka Diwan, Shri R.K Tanwar, Shri G. Anil, Shri B.D.V Rao and Shri Naveen Kumar.

Finally, I am extremely grateful to my parents and wife who bravely put up with my late night study periods.

I need to add that none of the above is responsible for the omissions and commissions that might be found in this work for which I take the full responsibility.

Prashant Salwan
