ACKNOWLEDGEMENTS

First and foremost, my deepest gratitude goes to my thesis supervisors, Prof. Deepak Kumar and Dr. Sanjay Puri, for introducing me to this fascinating field and always being there with copious ideas, lots of encouragement, enthusiasm and optimism. They were always there to steer me back on the right track whenever a bogus numerical result or a wrong calculation caused me to lose faith. In fact, it is their friendly company that made my research work much more enjoyable and my stay at the School of Physical Sciences (SPS) a memorable one.

I am indebted to Prof. R. Ramaswamy for his keen interest in my research, encouragement and assistance in allowing me to use his computational facility, during the early stage of this work. The Bioinformatics Center, Jawaharlal Nehru University, also provided me with substantial amounts of computer time for my simulations.

I have also benefited from discussions with other faculty members here at SPS — Drs. S. P. Das, S. Ghosh and S. Sarkar assisted me at different stages in my work. I would like to thank Dr. R. Mehrotra of National Physical Laboratory, Delhi, for assistance in debugging my program codes at the early stages of my work.

S.K. Das has shown willingness to help me when I was confused in writing logical and efficient program codes. It would be unfair if I don’t highlight the memorable company and friendship of G. Aggarwal, S. Banerjee, S. Dhar, S. Ghosh, C. Kaur, S. Negi, A. Niazi, A. Prasad, M. Ruman, M. Shrimali and S. Srivastava.

I would like to express my deep sense of gratitude towards the faculty, staff and students of SPS for their help, cooperation and friendship during the course of my thesis work. I am also grateful to the Ministry of Education, Ethiopia, for financial support.

Finally, I would like to thank my wife Mihret for her immeasurable love, understanding, patience, and support for all these years.
