List of Tables

5.1 Level energies ($E_x$), transition energies ($E_γ$), initial ($I_π^i$) and final ($I_π^f$) spin-parity of the transitions, relative intensities of γ-ray transitions ($I_γ$) and DCO ratios ($R_{dco}$) are shown for $^{62}\text{Cu}$. Level energies are given to the nearest keV. The error in the transition energy is about 0.1 keV (0.2 keV) for strong (weak) lines. .......................... 106

5.1 (Continued) ................................................. 107

5.1 (Continued) ................................................. 108

5.1 (Continued) ................................................. 109

5.2 Level energies ($E_x$), transition energies ($E_γ$), initial ($I_π^i$) and final ($I_π^f$) spin-parity of the transitions, relative intensities of γ-ray transitions ($I_γ$) and DCO ratios ($R_{dco}$) are shown for $^{63}\text{Cu}$, as obtained from the present work. Level energies are given to the nearest keV. The error in the γ-ray energy is about 0.1 keV (0.2 keV) for strong (weak) lines. 110

6.1 Level energies ($E_x$), spin-parity of the level ($I^*$), transition energies ($E_γ$), relative intensities of γ-ray transitions ($I_γ$) and DCO ratios ($R_{dco}$) are shown for $^{65}\text{Zn}$. Level energies are given to the nearest keV. The error in the transition energy is about 0.1 keV (0.2 keV) for strong (weak) lines. New γ-transitions and energy levels are marked by asterisks (*). .......................... 138

6.1 (Continued) ................................................. 139

6.1 (Continued) ................................................. 140
6.2 Level energies ($E_x$), spin-parity of the level ($I^*$), transition energies ($E_\gamma$), relative intensities of $\gamma$-ray transitions ($I_\gamma$) and DCO ratios ($R_{dco}$) are shown for $^{70}$Ge. Level energies are given to the nearest keV. The error in the transition energy is about 0.2 keV. New $\gamma$-transitions and energy levels are marked by asterisks (*). ................ 144

6.2 (Continued). .................................................. 145

6.3 Level energies ($E_x$), transition energies ($E_\gamma$), spin-parity of initial ($I^*_i$) and final ($I^*_f$) state of transition, relative intensity of transition and the DCO ratio ($R_{DCO}$) for few states are shown for $^{70}$As, as obtained from the present work. Level energies are given to the nearest keV. The error in the transition energy is about 0.2 keV. ................. 151
