ACKNOWLEDGMENT

Every achievement, big or small, indeed gives a sense of fulfillment to the achievers. However, to believe that the achiever is the sole individual, worthy of praise, would be greatly distorting the truth. As I experience this sense of fulfillment and as I wait to embark on an open journey in life, I wish to duly acknowledge all those who contributed in diverse ways in helping me to give shape and sense to my efforts.

First, I would like to thank my advisor, Dr. Meena Karve, for her enduring patience and guidance over the course of my research career. Her knowledge and commitment to the study of enzyme based biosensors motivated me to always think of different possibilities and to have patience when things weren’t always successful. My heart felt gratitude to her, who really blended me perfectly to conclude my work satisfactorily.

I thank Prof. R. S. Mali and Prof. B. S. M. Rao, Heads of the Chemistry Department for providing the necessary facilities during my tenure of research. The valuable expertise and inputs from Prof. S. B. Padvite proved to be very useful during my work. I sincerely thank the faculty at the Division of Biochemistry, who have been my teachers and have directly helped me reach this stage in my life. It is indeed a privilege to acknowledge Dr. S. J. D’Souza, Head, NABT division, BARC Mumbai (India) who helped me in several ways during the tenure of my research.

An obtaining SEM image and AFM images of the polymer films was an integral part of my work, which I got done from CMET Pune and IIT Mumbai. I am very grateful to every individual at both these places for their timely support and help. I sincerely thank Prof. S. V. Bhoraskar and her group (Department of Physics, University of Pune) for providing porous silicon samples. The serum samples for my assays were arranged by Dr. S. R. Karve of Ruby Hall Clinic, Pune (India). This contribution also is duly acknowledged. I also extend my sincere thanks to Dr. K.C. Persaud, UMIST, Manchester (UK) for giving ammonium ion selective electrode as a gift.

The financial support from BARC Mumbai as JRF is greatly acknowledged. My colleagues and friends at the lab have been the greatest assets and have enriched my life greatly, both my curricular as well as extra curricular life. I would specially like to mention our research group—Sanket, Sudha and Dipali for their help especially during the final stage of my work and in the preparation of this thesis. Thanks are also due to Sabari, Nikhil, Santosh, Tarun, Sheeja and other research students for maintaining a lively and friendly atmosphere both inside and outside the lab. I also thank the laboratory assistants, administrative and technical staff at chemistry department.
Words are insufficient to express my gratitude's towards my maiden family (parents, sister and her family, brother) and my new family (parents – in - law, brothers and sisters – in -law, nieces and nephews) It is their affection, concern and quite patient cooperation that has driven me to this achievement.

Uday, my husband, my love, my strength –
From whom I derived my own strength,
With whom I shared my ups and downs,
For whom I have a heart full of love and gratitude for allowing me to be myself.

Miss Manjusha M. Kulkarni
Candidate
