This study has been made under the supervision of Dr. K. C. Malhotra, Indian Statistical Institute, Calcutta. Despite his numerous preoccupations, Dr. Malhotra has spared no effort to put me always on the right track and to offer his generous comments and suggestions, all of which have left an indelible imprint on the final version of the study. For all this, if not for a lot more, no word will be adequate enough to express the extent of gratitude and indebtedness I owe to him.

The work was initially started under the supervision of Dr. R. K. Gulati. After he left the Poona University Dr. Malhotra was kind enough to see through the completion of this thesis. I acknowledge my gratitude to Dr. R. K. Gulati also.

At the stage when the need of laboratory facilities for serological and some such other analysis was great, and I was on the frantic search for them, Prof. G. S. Mutilak, the then Dean, B. J. Medical College, Poona came to my rescue and extended all the facilities needed by me. I would like to put in record my deep sense of gratitude to him. I would also like to express my appreciation to the authority
of the Armed Forces Medical College, Poona for allowing me to utilize its laboratory facilities at another stage.

I wish to express my deep sense of gratitude to Prof. Y. B. Damle and Dr. V. G. Pundalik of the Department of Sociology and Anthropology, University of Poona, for their encouragement to this project.

I would like to express my appreciation for the many suggestions which I received at the initial stage of my study from Dr. A. Sharma and Dr. S. K. Basu, of Delhi University and Dr. A. R. Banerjee, Calcutta University.

Mr. Partha Pratim Mazumdar, Indian Statistical Institute, Calcutta, suggested a number of statistical tools appropriate for the analytical purpose of my study. What is more, he helped me immensely in processing the data. I gratefully acknowledge his generous help and assistance.

I would like to express my appreciation to the staff of the Gokhale Institute Library, Maharashtra Association for Cultivation of Science, Poona and Indian Statistical Institute, Calcutta for their courteous co-operation.

I would like to express my appreciation to my husband Prof. A. Guha and my son, Joy for putting up with the many inconveniences which are unavoidable while the 'caretaker' of the house is engaged in a pursuit of this type. My indebtedness to my husband is much more than just that. It is he
who through his untiring persuasion made me to understand this academic pursuit instead of household management which had been my sole preoccupation ever since my master degree.

I owe to many other people, specially the individuals from whom I have collected the data for the present study, the mention of all of whom is an impossibility.

It is a real pleasure to acknowledge the excellent technical assistance provided by Mr. Mrinal Kanti Chakraborty, Centre for Studies in Social Sciences, Calcutta. Thanks are also due to Kishore, my nephew, and Joy for their help in checking the typed script.

All these people helped me significantly in giving the final shape to the study. Yet the fact remains that I and I alone am responsible for all the omissions and commissions that persist in the study.

Department of Sociology and Anthropology, University of Poona
Poona-7.
September 1975.
