LIST OF FIGURES

Fig 1: *Aedes aegypti* mosquito.

Fig 2: Mitochondrial genome of *Anopheles quadrimaculatus*.

Fig 3: Geographic locations of collection of different *Aedes aegypti* populations.

Fig 4: Mosquito collection and rearing:
   A. Indoor adult mosquito collection.
   B. Larval rearing in the laboratory for the study.

Fig 5: PCR products run on 1.2% agarose gel using different quantities (μl) of 50 mM MgCl₂.

Fig 6: PCR product using ND4 primers run on 1.2% agarose gel prior to purification.

Fig 7: PCR products using Cyt b primers run on 1.2% agarose gel prior to purification.

Fig 8: PCR product using 16S rRNA primers run on 1.2% agarose gel prior to purification.

Fig 9: Electropherogram of *Aedes aegypti* population [HADMAH] using primer ‘CYT BF’.

Fig 10: Variable nucleic acids in *Ae. aegypti* from different geographical locations showing polymorphic sites for Cyt b, ND4 and 16S rRNA genes.

Fig 11: Phylogeny tree using UPGMA with Maximum Composite Likelihood and 1000 btp for *Ae. aegypti* populations based on ND4 sequences:
   A: *Ae. aegypti* study populations.
   B: *Ae. aegypti* study populations along with *Ae. albopictus* as an out-group.

Fig 12: Phylogeny tree using UPGMA with Maximum Composite Likelihood and 1000 btp for *Ae. aegypti* populations based on Cyt b sequences:
   A: *Ae. aegypti* study populations.
   B: *Ae. aegypti* study populations along with *Ae. albopictus* as an out-group.

Fig 13: Phylogeny tree using UPGMA with Maximum Composite Likelihood and 1000 btp for 43 *Ae. aegypti* populations based on 16S rRNA sequences:
   A: 43 *Ae. aegypti* study populations.
   B: *Ae. aegypti* study populations along with *Ae. albopictus* as an out-group.

Fig 14: Phylogenetic tree using UPGMA with Maximum Composite Likelihood and 1000 btp for 43 *Ae. aegypti* populations based on Cyt b and ND4 sequences:
   A: *Ae. aegypti* study populations.
   B: *Ae. aegypti* study populations along with *Ae. albopictus* as an out-group.
Fig 15: Phylogenetic tree using UPGMA with Maximum Composite Likelihood and 1000 btp for 43 *Ae. aegypti* populations based on Cyt b and ND4 and 16S rRNA sequences:

A: *Ae. aegypti* study populations.
B: *Ae. aegypti* study populations along with *Ae. albopictus* as an out-group.

Fig 16: The polymerase chain reaction products amplified using primer B03 on DNA extracted from populations of *Ae. aegypti*.

Fig 17: The polymerase chain reaction products amplified using primer B13 on DNA extracted from populations of *Ae. aegypti*.

Fig 18: The polymerase chain reaction products amplified using primer A02 on DNA extracted from populations of *Ae. aegypti*.

Fig 19: Gel picture showing RAPD PCR product on 1.2% agarose gel from parent and F1 generation of Delhi *Ae. aegypti* population.

Fig 20: Dendogram showing genetic relatedness among *Ae. aegypti* populations in India based on RAPD PCR analysis.

Fig 21: Dendogram based on genetic distance of various *Ae. aegypti* populations using Nei’s unbiased genetic distance.

Fig 22: Larval mosquito susceptibility using the methodology as per WHO guidelines.

Fig 23: The World Health Organization adult mosquito susceptibility test.
