Acknowledgement

It is not until you undertake a research work like this one that you realize how massive an effort it really is, or how much you must rely upon the selfless efforts and goodwill of others. There are many well-wishers who helped me with this work, and I want to thank them all.

I would like to express my deepest gratitude to my advisor Prof. P. C. Saxena for his relentless support and his great technical advice. He has been exceptionally encouraging throughout and right from the inception of this work treated me more like a colleague than as an advisee. His insights during our simulating deliberations ‘bouts ‘ would invariably bring articulacy and very often open up new directions that I would have missed altogether. I enjoyed my tenure as a scholar much more than I had anticipated starting out and I owe a large part of it to Prof. Saxena. He has miraculous ability to convert globs of text (quite often written by me) into an exquisitely organized paper in a single sitting. Most of the research work presented here in this thesis, is an outcome of our joint work and I thank him for allowing me to use it in my thesis. I have also been very fortunate to work with Prof. C. P. Katti (my co-advisor), Jawaharlal Nehru University. He has been a constant source of sage wisdom and I deeply appreciate all his help and support. They make a great team and I wish many more students gain from their co-guidance.

Many thanks are also due to Prof. K. K. Bharadwaj, Dean, School of Computer and System Sciences for being on my committee on more than one occasion and providing necessary facilities at the school.

I would like to thank my ex-Principal Mohan Lal Ji under whom I worked at PGDAV College. He was a catalyst who not only allowed me to join the graduate course but also encouraged me throughout. He also quite often went out of his way to solve any bureaucratic hurdles. It was only due to his sincere efforts my study leave was approved by the University
of Delhi, for pursuing this graduate program. Dr. H. L. Bhatia, Principal of our institute also deserves special thanks for all his support and co-operation during this tenure.

I have to also thank a number of friends whose company has been invaluable over the years – Ritu, Sarita, Aparna, Poonam, Varuna, Anand, Amit, Bal Kishor and Jagmohan who were always great fun to be with. In particular, Jagmohan Rai, my colleague and fellow researcher, deserves special thanks for always being around when the going really got tough. He, as a moving encyclopedia always has the right pointers for any information. I also thank him for all the long distance jam sessions.

Last but not the least, I must thank my family – my beloved wife Sangeeta for putting up with me during the last four years of mania. I also thank her for tolerating my hectic schedule, understanding the evenings and weekends in the library and laboratory, and still encouraging for more innovative research work. My little daughter Aadrika also contributed her share by regular hugs and affection and by offering small glasses of cool water. Thanks also to maternal grandparents of my daughter, Janak and Ramesh Sibal, for their regular advise. Sanjay, Ritu, Priya and Abhay also deserve extraordinary thanks for their co-operation. My parents Rama and Gobind Arora deserve special thanks, without whose love, support and encouragement I would not be where I am today. Mum and Dad, by their own examples, taught the value of education and always encouraged me to do the best. For their love, wisdom and all the cheer, I will forever be grateful. This thesis is dedicated to them.
