ACKNOWLEDGEMENT

I shall fail my duly unless I record my indebtedness and gratitude to the following persons and organisations, without whose help, completion of present researches; eventuating submission of this thesis would not have been possible.

First of all, my deep sense of regards goes to my respected teacher and research supervisor, Dr. B.C. Mazumdar, M.Sc.(Agri.),Ph.D.,F.I.A.B.S.,F.I.L.E.E., the Reader, University College of Agriculture, Calcutta University, whose competent guidance at every step of my research, apart from steadfast encouragement would remain unforgettable to me forever.

Indebtedness is due to the Department of Sericulture and the Department of Agriculture, Government of West Bengal for imparting valuable suggestions in the matter of selection of the treatments in conducting the present research. The treatments in the study were taken in consideration to the need, that are presently felt in the locality where the experiment was taken up.

My wholehearted dedication also goes to the University College of Agriculture, Calcutta University for providing me necessary laboratory facilities required in connection with the research.
I gratefully acknowledge the kind co-operation that I had received from my colleagues, Mr. Ajit Kaibarta and Mr. Anath Mondal for their assistance in my experiments.

My deep sense of gratitude goes to Miss Paramita Mukhopadhya, the Research Fellow in the University of Calcutta for her great help to me in calculations of the data, arrangement of the components and in various other ways in the matter of writing up of the thesis.

Lastly, I desire to express my deep sense of loving respect to my mother, whose inspiration would remain as a great asset in my life.

Calcutta University,

[Satyaranjan Maity]
