Acknowledgement

Let me start with the lesson from the Gita (6.5)

"You are the only reason for your fall
You are the only reason for your rise"

I don't know what is meant by rise or fall in life. But, I believe in the power of blessings, power of selfless expectation, and power of love, which I have received from my parents, from my respected teachers, from so many silent faces with couple of dark eyes.

Let me start with Professor (Dr.) Samarjit Sengupta, the Acharya who pushed me first to the Dias to present a paper at the end of my student life and stood constantly behind me through out my presentation and yes, since then behind my technical, non technical instinct of my mind. He has extended his whole hearted support to me in all respect just like two hands enclosing a light. My little knowledge finds no word in dictionary to describe this silent wave of a true Karmayogi.

I am grateful to Dr. Madhuchhanda Mitra, Reader, Department of Applied Physics, for her constant support and endless encouragement in my research work and other activities. Her analytical views have been my source of energy throughout the work. Her technical advice has enhanced the quality and depth of the thesis. No word is too high to express my thanks to her.
I once again express my deep sense of gratitude and most sincere thanks to my supervisor of this thesis Professor (Dr.) Samajit Sengupta and associate supervisor Dr. Madhuchhanda Mitra, Department of Applied Physics, University of Calcutta for their inspirational and affectionate guidance, constant encouragement, an untiring help without which it would have been impossible on my part to complete this work.

I want to express my deep rooted respect to my teacher and my teacher's teacher Professor (Dr.) A. K. Mukhopadhyay, former Vice Chancellor, Tripura University, former Head and Professor, Department of Applied Physics, for his guidance jointly with Professor (Dr.) Samarjit Sengupta in my B. Tech and M. Tech projects and constant encouragement and valuable advice since my student life.

I express my sincere thanks to Professor (Dr.) Goutam Sarkar, former Head, Department of Applied Physics and Professor (Dr.) Sunit Kumar Sen, Head, Department of Applied Physics and other respected teachers and technical staffs for providing good infrastructure in the department.

I express my sincere thanks to Shri Arghya Sarkar, M. C. K. V. Institute of Technology, Ms. Sawan Sen, Techno India Group, Ashim Dey, Meghnath Saha Institute of Technology, Sk S K Ahamed, Serampore Textile College, Shri Subrata Karmakar, Department of Applied Physics and other colleagues for their constant support and cooperation in my research work. Though utmost care has been taken in completion of this thesis, a few typographical errors may have crept in, which is highly regretted. I shall be obliged to receive intimation of those errors and any helpful suggestions.

I pay my deep sense of respect to my father Shri Krishna Mohan Chattopadhyay and my mother Smt. Mira Chattopadhyay whose blessing and
selfless expectation have been creating tract of my life. Without their endless effort, I would not be in a position to write this acknowledgement.

After this, I express my appreciation to my sister Smt Mahua Bondopadhyay, my brother Santanu Chattopadhyay and his wife Smt. Priyanka Chattopadhyay, my wife Smt. Indira Chattopadhyay, my daughter Arundhati and all other family members for their support in my work in various ways.

Now, I am taking a short break from my never-ending acknowledgement with some words of Albert Einstein

“A hundred times a day I remind myself that my inner and outer life depends upon the labours of other men, living and dead, and I must exert myself in order to give the same measure as I have received and am still receiving”
