

LIST OF FIGURE

<u>Figure</u>		<u>Page</u>
1.	Mortality (%) of H.fossilis in different concentrations of cadmium sulphate in different exposure durations.	150
2.	24 hrs Median lethal concentration (24h LC50) determination of cadmium sulphate to H.fossilis by Probit Analysis.	151
3.3.	48 hrs Median lethal concentration (48h LC50) determination of cadmium sulphate to H.fossilis by Probit Analysis.	152
4.	72 hrs Median lethal concentration (72h LC50) determination of cadmium sulphate to H.fossilis by Probit Analysis.	153
5.	96 hrs. Median lethal concentration (96h LC50) determination of cadmium sulphate to H.fossilis by Probit Analysis.	154
6.	Toxicity curve of cadmium sulphate to H. fossilis .	155
7.	Mortality (%) of C. mrigala in different concentrations of mercuric chloride in different exposure durations.	156
8	24 hrs Median lethal concentration (24h LC50) determination of mercuric chloride to C. mrigala by Probit Analysis.	157
9.	48 hrs Median lethal concentration (48h LC50) determination of mercuric chloride to C. mrigala by Probit Analysis.	158
10.	72 hrs Median lethal concentration (72h LC50) determination of mercuric chloride to C.mrigala by Probit Analysis.	159
11.	96 hrs. Median lethal concentration (96h LC50) determination of mercuric chloride to C. mrigala by Probit Analysis.	160
12.	Toxicity curve of mercuric chloride to C. mrigala .	161
13	Mortality (%) of H.fossilis in different concentrations of nickel sulphate in different exposure durations.	162
14.	24 hrs Median lethal concentration (24h LC50) determination of nickel sulphate to H. fossilis by Probit Analysis.	163

15.	48 hrs. Median lethal concentration (48h LC50) determination of nickel sulphate to H.fossilis by Probit analysis.	164
16.	72 hrs. Median lethal concentration (72h LC50) determination of nickel sulphate to H.fossilis by Probit analysis.	165
17.	96 hrs. Median lethal concentration (96h LC50) determination of nickel sulphate to H.fossilis by Probit analysis.	166
18.	Toxicity curve of nickel sulphate to H.fossilis .	167
19.	Effect of exposure durations on mortality of H.fossilis in different concentrations of cadmium sulphate.	168
20.	Effect of exposure durations on mortality of C.mrigala in different concentrations of mercuric chloride.	169
21.	Effect of exposure durations on mortality of H.fossilis in different concentrations of nickel sulphate.	170
22.	Changes in opercular movement per minute of H.fossilis in different exposure durations in different concentrations of cadmium sulphate.	171
23.	Changes in opercular movement per minute of C.mrigala in different exposure durations in different concentrations of mercuric chloride.	172
24.	Change in opercular movement per minute of H.fossilis in different exposure durations in different concentrations of nickel sulphate.	173
25.	Change in growth of H.fossilis in 30 days exposure to cadmium sulphate.	174
26.	Change in growth of C.mrigala in 20 days exposure to mercuric chloride.	175
27.	Change in growth of H.fossilis in 30 days exposure to nickel sulphate.	176
28.	Accumulation of cadmium in gills of H.fossilis .	177
29.	Accumulation of cadmium in liver of H.fossilis .	178
30.	Accumulation of cadmium in kidney of H.fossilis .	179
31.	Accumulation of mercury in gills of C.mrigala .	180

32.	Accumulation of mercury in liver of <i>C.mrigala</i> .	181
33.	Accumulation of mercury in kidney of <i>C. mrigala</i> .	182
34.	Accumulation of nickel in gills of <i>H. fossilis</i> .	183
35.	Accumulation of nickel in liver of <i>H.fossilis</i> .	184
36.	Accumulation of nickel in kidney of <i>H. fossilis</i> .	185
37.	Regression line indicating relationship between exposure durations and mortality in different concentrations of cadmium sulphate to <i>H.fossilis</i> .	186
38.	Regression line indicating relationship between exposure durations and mortality in different concentrations of cadmium sulphate to <i>H.fossilis</i> .	187
39.	Regression line indicating relationship between exposure durations and mortality in different concentrations of cadmium sulphate to <i>H.fossilis</i> .	188
40.	Regression line indicating relationship between exposure durations and mortality in different concentrations of cadmium sulphate to <i>H.fossilis</i> .	189
41.	Regression line indicating relationship between exposure durations and mortality in different concentrations of mercuric chloride to <i>C.mrigala</i> .	190
42.	Regression line indicating relationship between exposure durations and mortality in different concentrations of mercuric chloride to <i>C.mrigala</i> .	191
43.	Regression line indicating relationship between exposure durations and mortality in different concentrations of mercuric chloride to <i>C.mrigala</i> .	192
44.	Regression line indicating relationship between exposure durations and mortality in different concentrations of mercuric chloride to <i>C.mrigala</i> .	193
45.	Regression line indicating relationship between exposure durations and mortality in different concentrations of mercuric chloride to <i>C.mrigala</i> .	194
46.	Regression line indicating relationship between exposure durations and mortality in different concentrations of nickel sulphate to <i>H. fossilis</i> .	195
47.	Regression line indicating relationship between exposure durations and mortality in different concentrations of nickel sulphate to <i>H. fossilis</i> .	196

48.	Regression line indicating relationship between exposure durations and mortality in different concentrations of nickel sulphate to <i>H. fossilis</i> .	197
49.	Regression line indicating relationship between exposure durations and mortality in different concentrations of nickel sulphate to <i>H. fossilis</i> .	198
50.	Regression line indicating relationship between exposure durations and opercular movement in different concentrations of cadmium sulphate to <i>H. fossilis</i> .	199
51.	Regression line indicating relationship between exposure durations and opercular movement in different concentrations of cadmium sulphate to <i>H. fossilis</i> .	200
52.	Regression line indicating relationship between exposure durations and opercular movement in different concentrations of mercuric chloride to <i>C. mrigala</i> .	201
53.	Regression line indicating relationship between exposure durations and opercular movement in different concentrations of mercuric chloride to <i>C. mrigala</i> .	202
54.	Regression line indicating relationship between exposure durations and opercular movement in different concentrations of mercuric chloride to <i>C. mrigala</i> .	203
55.	Regression line indicating relationship between exposure durations and opercular movement in different concentrations of nickel sulphate to <i>H. fossilis</i> .	204
56.	Regression line indicating relationship between exposure durations and opercular movement in different concentrations of nickel sulphate to <i>H. fossilis</i> .	205
57.	Regression line indicating relationship between exposure durations and opercular movement in different concentrations of nickel sulphate to <i>H. fossilis</i> .	205
58.	Regression line indicating relationship between exposure durations and accumulation of cadmium in different concentrations of cadmium sulphate in the gills of <i>H. fossilis</i> .	206

59.	Regression line indicating relationship between exposure durations and accumulation of cadmium in different concentrations of cadmium sulphate in the liver of <i>H. fossilis</i> .	207
60.	Regression line indicating relationship between exposure durations and accumulation of cadmium in different concentrations of cadmium sulphate in the liver of <i>H. fossilis</i> .	208
61.	Regression line indicating relationship between exposure durations and accumulation of cadmium in different concentrations of cadmium sulphate in the kidney of <i>H. fossilis</i> .	209
62.	Regression line indicating relationship between exposure durations and accumulation of mercury in different concentrations of mercuric chloride in the gills of <i>C. mrigala</i> .	210
63.	Regression line indicating relationship between exposure durations and accumulation of mercury in different concentrations of mercuric chloride in the gills of <i>C. mrigala</i> .	211
64.	Regression line indicating relationship between exposure durations and accumulation of mercury in different concentrations of mercuric chloride in the liver of <i>C. mrigala</i> .	212
65.	Regression line indicating relationship between exposure durations and accumulation of mercury in different concentrations of mercuric chloride in the liver of <i>C. mrigala</i> .	213
66.	Regression line indicating relationship between exposure durations and accumulation of mercury in different concentrations of mercuric chloride in the liver of <i>C. mrigala</i> .	214
67.	Regression line indicating relationship between exposure durations and accumulation of mercury in different concentrations of mercuric chloride in the kidney of <i>C. mrigala</i> .	215
68.	Regression line indicating relationship between exposure durations and accumulation of nickel in different concentrations of nickel sulphate in the gills of <i>H. fossilis</i> .	216
69.	Regression line indicating relationship between exposure durations and accumulation of nickel in different concentrations of nickel sulphate in the gills of <i>H. fossilis</i> .	217

70. Regression line indicating relationship between exposure durations and accumulation of nickel in different concentrations of nickel sulphate in the liver of *H. fossilis*. 218

71. Regression line indicating relationship between exposure durations and accumulation of nickel in different concentrations of nickel sulphate in the liver of *H. fossilis*. 219
