ACKNOWLEDGMENT

The present investigations have been carried out under the constant supervision and valuable guidance of Prof. B. N. Srivastava, D.Sc., F.N.I., F.P.S. (London) and the author is particularly grateful to him for his constant and stimulating encouragement and keen interest throughout the progress of the work.

The author feels it a pleasant duty to extend his gratitude to all members of the Department of General Physics and X-rays to whom he is directly or indirectly indebted for their help and co-operation.

The author is particularly indebted to Dr. A.K. Barua for his extremely valuable suggestions and help.
