Contents

Preface ........................................... i
Symbol & Abbreviations ......................... ii-iii

Chapter 1: Introduction ......................... 1-4

Background ..................................... 1-2
Objectives of present work ................... 2
Rationale of present work ..................... 2-4

Chapter 2: Review of Literature ............... 5-25

Prelude ......................................... 5
Distribution of naturally occurring antimicrobial peptides ............................ 6-9
Structural features ................................ 9-10
Characteristics that affect antimicrobial activity and specificity .................. 11-12
Spectrum of activity of antimicrobial peptides ........................................... 13-14
Mode of action .................................. 15-21
Obstacles in the therapeutic use of antimicrobial peptides ......................... 21-23
Clinical experience ............................. 23-25
Summing all this up ............................ 25

Chapter 3: Materials And Methods ............. 26-35

Materials ........................................ 26
Methods ........................................ 26-35

Chapter 4: Melittin .............................. 36-53
The molecular basis of selective lytic activity of several novel analogs of melittin against human red blood cells and E. coli

Introduction ..................................... 36-37
Results .......................................... 37-49
Discussion ...................................... 49-53

Chapter 5: Magainin 2 ......................... 54-68
Inducing toxicity by introducing a leucine zipper motif in magainin 2

Introduction ..................................... 54-56
Results .......................................... 56-65
Discussion ...................................... 65-68

Chapter 6: Bombolitin V ....................... 69-82
Regulating toxicity of bombolitin V and designing its novel analog having increased antimicrobial activity with simultaneous reduction in toxicity

Introduction ..................................... 69-70
Results .......................................... 71-79
Discussion ...................................... 79-82
Conclusive remarks  83
Bibliography  84-95
List of publications  96
