

## List of Figures

- Fig. 1 : Protein patterns of the nuclear fractions.
- Fig. 2 : Scanning electron micrographs of nuclei and nuclear matrices.
- Fig. 3 : SDS-PAGE analysis of the nuclei and nuclear matrix associated proteins in neurons and **glia**
- Fig. 4 : Developmental expression of neuronal and glial nuclear proteins (45 days).
- Fig. 5 : Developmental expression of neuronal nuclear matrix proteins (45 days)
- Fig. 6 : Developmental expression of glial nuclear matrix proteins (45 days)
- Fig. 7 : Developmental expression of neuronal and glial nuclear and nuclear matrix proteins (180 days)
- Fig. 8 : Isolation and fractionation of proteins from neuronal nuclear matrix extracted by high salt method.
- Fig. 9 : Isolation and fractionation of proteins from neuronal nuclear matrix extracted by low salt method.
- Fig. 10 : Isolation and fractionation of proteins from glial nuclear matrix extracted by high salt method.
- Fig. 11 : Isolation and fractionation of proteins from glial nuclear matrix extracted by low salt method.
- Fig. 12 : HPLC profiles of neuronal nuclear matrix proteins.
- Fig. 13 : HPLC profiles of glial nuclear matrix proteins.
- Fig. 14 : single strand DNA-cellulose chromatography of proteins from neuronal nuclear matrix extracted by low salt method from.
- Fig. 15 : single strand DNA-cellulose chromatography of proteins from glial nuclear matrix extracted by low salt method from.

Fig. 16 : **Immunodiffusion**

Fig. 17 : Western blot analysis of nuclear and nuclear matrix associated proteins with their antibodies.

Fig. 18 : Tissue specificity of Nuclear matrix proteins. Western blot analysis.

Fig. 19 : Nuclear protein patterns from normal cells and tumor cell lines.

Fig. 20 : **Immuno** reactivity of the four antibodies with the tumor cell lines
