The present thesis embodies the results of kinetic and related investigations on the polymerization of methyl methacrylate, a vinyl monomer with the use of some complex initiator systems primarily based on pyridine-sulphur dioxide C.T. complex. The work was carried out by the author in the laboratory of Plastics and Rubber Technology Division of the Department of Applied Chemistry, Calcutta University.

The author wishes to express his profound gratitude and indebtedness to his teacher Dr. P. Ghosh, M.Sc. (Tech.), Ph.D., F.P.R.I., Reader, Department of Applied Chemistry, Calcutta University for his keen interest, valuable guidance and constant encouragement during the tenure of the present work.

The author also records his indebtedness to the Head of the Department of Applied Chemistry, Calcutta University, for kindly permitting him to carry out the present investigations in the Department placing all laboratory and library facilities at his disposal.

The author acknowledges the help and co-operation received from Dr. A. N. Banerjee, Dr. T.K. Sengupta, Dr. M. S. Banerjee, Mr. A. K. Mitra, Mr. Prabir Gupta, Mr. T.K. Ghosh, Mr. G. Mukherjee, Mr. S.N. Maity, Mr. S. Jana and Mr. D. Chowdhury of the Department of Applied Chemistry, Calcutta University.
