ACKNOWLEDGEMENTS

I wish to express my gratitude and indebtedness to Prof. (Mrs.) Archana Sharma, Professor of Genetics, Department of Botany, University of Calcutta, for her constant guidance and encouragement throughout the course of this work. It was Dr. (Mrs.) Geeta Talukder, Institute of Postgraduate Medical Education and Research, who introduced me to the study of sex chromatin and human chromosomes. Grateful thanks are extended for her unfailing interest, valuable expert help and for giving me the opportunity to profit from her extensive experience of medical research.

I also wish to express my thanks to Prof. A. K. Sharma, Professor and Head of the Department of Botany, University of Calcutta and Dr. K. P. Sengupta, Director, Institute of Postgraduate Medical Education and Research, Calcutta for encouragement and facilities provided.

I am indebted to the doctors in the different Out Patients Departments of S.S.K.M. Hospital, Calcutta, especially to Dr. D. P. Das of Department of Gynaecology, for referring the cases.

Sincere thanks are extended to Miss Mabel Rozario for typing this thesis and to Miss Anusri Banerjee for photography. I also wish to thank all the members of my family for bearing with me during the preparation of this manuscript and my friends and colleagues for their kind co-operation, assistance and criticisms.

Thanks are due to the Council of Scientific and Industrial Research, New Delhi, for the grant of a Junior fellowship during the tenure of this work.
