2.1. Hypothesis                                          | 47       |
2.2. Work Concept                                       | 48       |
2.3. Introduction                                       | 49       |
2.4. Materials and Methods                              | 55       |
2.5. Results                                            |          |
  2.5.1 Total Phenolic content in Black Cumin and        |          |
  Swallow root extracts.                                 |          |
  2.5.2 Effect of Black Cumin extracts in inhibiting     |          |
  LDL oxidation.                                         |          |
  2.5.3 Effect of Black Cumin extracts on soybean        |          |
  lipoxygenase induced linoleic acid peroxidation.       |          |
  2.5.4. DPPH radical Scavenging ability.                |          |
  2.5.5. Reducing power ability.                         |          |
  2.5.6. Cytoprotective effect.                          |          |
  2.5.7. DNA Protective effect.                          |          |
  2.5.8. Identification of phenolic acids in Black cumin |          |
  and Swallow root extracts.                             |          |
### 2.5.9. Characterization of the major antioxidant compounds of Black cumin and Swallow root extracts.

### 2.5.10. Contribution from phenolic acids in Black cumin and Swallow root antioxidant activity.

### 2.6. Discussion

**Summary and conclusion**

---

**Chapter 3. Isolation and characterization of antimetastatic components from spices**

#### 3.1. Hypothesis

---

#### 3.2. Work Concept

---

#### 3.3. Introduction

---

#### 3.4. Materials and Methods

---

#### 3.5. Results

- **3.5.1.** Extraction of pectic polysaccharide from Black cumin and Swallow root

- **3.5.2.** Antimetastatic property of pectic polysaccharides of black cumin (BCPP) and swallow root (SRPP)

- **3.5.3.** Purification of SRPP

- **3.5.4.** Determination of purity of active SRPP fraction – 0.15 M by HPLC.

- **3.5.5.** Sugar composition analysis of SRPP and DEAE fractions of SRPP

- **3.5.6.** Determination of molecular size of active 0.15 M pectic polysaccharide fraction of SRPP

- **3.5.7.** Determination of NMR analysis of active 0.15 M pectic polysaccharide fraction of SRPP.

#### 3.6. Discussion

**Summary and conclusion**

---
Chapter 4. Determination of efficacy and mechanism of action of antioxidants and antimetastatic components using *in vitro* biochemical and cell culture assay model systems

4.1. Hypothesis
4.2. Work Concept
4.3. Introduction
4.4. Materials and Methods
4.5. Results
   4.5.1 HSA-phenolics interaction studies
   4.5.2 DNA–phenolics interaction studies
   4.5.3 Antimetastatic components-cell interaction studies
4.6. Discussion
   Summary and conclusion

Chapter 5. Efficacy of combinational supplementation of antioxidants and antimetastatic components against cancer employing *in vivo* cancer animal models

5.1. Hypothesis
5.2. Work Concept
5.3. Introduction
5.4. Materials and Methods
5.5. Results
   5.5.1. Effect of antioxidants in aqueous extracts of black cumin and swallow root on oxidative stress induced hepatotoxicity by CCl₄ in albino rat model.
   5.5.2. Effect of Antioxidants in aqueous extracts of black cumin and swallow root on 20-methylcholangrene induced cervical cancer in albino mice model.
5.5.3. Effect of antioxidants of swallow root-HMBA and galectin-3 inhibitory polysaccharides-SRPP on B16F10 mouse melanoma cells induced metastasis.

5.6. Discussion

Summary and conclusion
