

Acknowledgments

With sincere respect and utmost regards, I gratefully acknowledge my Ph.D supervisor, Dr. Deepak. Kumar, for his consistent and sincere guidance over the last five years, which has resulted in the present thesis. He has been a great teacher during all these years. He has always stimulated me to learn and achieve more and more, and also to just *drill* through every problem. I thank him for his valuable advices on scientific as well as general matters.

My special thanks to Dr. A. Rastogi and Dr. S. Sarkar, who have always been very encouraging teachers and immensely helpful and providing a healthy critique of my reports in the Ph.D. committee meetings, which helped me in many ways to improve on various aspects of my work as well as presentation. I also thank all the Faculty members at the S.P.S., who actually make S.P.S. a conducive place for inspiring the young students to do meaningful research in Physics.

My friend Madhusudan Tyagi has not only been a great company in all these years, but he has always been more than forthcoming in discussing on the problems I faced in my research work. He has been a great support in the tough times I faced, many thanks to him for bearing me. I also thank Upendra Harbola, Anjana and Charan for giving me the pleasurable company during my stay at SPS. I also acknowledge my friends Ajit, Subhashish, Niladari, Sunil, Amitabh, Santosh, Rashid, Mohanty, Gurpreet and Khuram for always being helpful to me. I also thank Narendra for helping me in typing my thesis.
